PREFACE

The Fifth Population and Housing Census, initially due in March 1991, was conducted from 2-18 March 1998 throughout the country including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e., from 2nd to 4th March houselisting was carried out wherein each house was physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory served as a guideline for the supervisors besides ensuring complete coverage, during the census operation.

There were 3 separate questionnaires used for houselisting and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for houselisting. Form-2 i.e., short form (Annex-B) was used for collection of information about all persons on core questions such as name, relationship with the head of the household, residential status, sex, age, marital status, nationality, religion, mother tongue, literacy, educational attainment and possession of national identity card, number of rooms, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuel used, type of kitchen, bathroom and toilet facilities and watching of TV and radio and reading of newspapers.

Form-2-A i.e., long form (Annex-C) was used for obtaining additional information about migration alongwith its reasons, field of education, economically active population, fertility, disability and inoculation of children against 6 diseases were asked on sample basis. About 8 percent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample. Necessary definitions and concepts relating to the above mentioned questionnaires/forms are given at (Annex-D) for information of the readers.

The report mainly consists of three sections viz write up which carries general description of the district and some analysis of population and housing data, second section comprises tables while third section provides additional information about these sections in the form of annexures.

The write up section contains three main parts viz (i) general description about the district, (ii) broad analysis of population census data and (iii) broad analysis of housing census data. The general description covers location, boundary, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure beside introducing the district. The broad analysis of population census data deal with population size, growth and distribution, other demographic and socio-economic characteristics.

The broad analysis of housing census data throw light on housing units/households, in terms of information on number of rooms, population density per housing unit and per room, tenure, period since constructed, construction material used on walls and roofs, source of drinking water, source of lighting, cooking fuel used in kitchen, availability of kitchen, toilet and bathroom facilities and assessment of media reach etc.

The report comprises 52 tables in all, 40 relate to population data, 12 to housing data. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are given in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the detail occupational groups and industry divisions and district/sub-division map are appended at Annex-E, F & G respectively.

Census taking was a gigantic task which involved the whole nation in one way or the other which is commendable as a team work. The role of Provincial Governments was very vital and with out their active cooperation, the operation would not have been successful. The meritorious services rendered by the field staff in addition to their own jobs, are also appreciable. The services rendered by the staff and officers of Federal Bureau of Statistics in training and data processing was helpful. I am personally indebted to the Federal Government who inculcated in me a sense of responsibility to conduct the census in March 1998, and releasing the data as early as possible for the benefits of all users.

The Armed Forces supported the Population and Housing Census work on hundred percent basis therefore, I extend my gratitude to their officers/staff involved in this operation.

I also thank the International Agencies like UNFPA, UNDP, UNICEF for their financial assistance in acquiring equipment & machinery and technical support in the form of consultancy services, training and study visits abroad.

Finally I thank the officers and staff members of the Population Census Organization for their relentless efforts to complete the census successfully.

PART - I
GENERAL DESCRIPTION
OF THE DISTRICT

1 GENERAL DESCRIPTION OF THE DISTRICT

1.1 GEOGRAPHY

1.1.1 Name, Location, Boundary and Area

Bolan district was created on 31 December, 1991. Prior to that it was a part of, the then, Kachhi district. The famous Bolan pass which links Quetta with Sibi, through railway and road is situated in this district. The district headquarters is at Dhadar. In summer the headquarter of D.C Bolan moves to Mach a little cooler place than Dhadar.

The district lies between 28° 41' and 29° 28' north latitudes and 67° 09' and 68° 31' east longitudes. It is bounded on the north by Mastung district, on the north-east by Sibi and Kohlu districts, on the east by Dera Bugti district, on the south by Nasirabad and Jhal Magsi districts and on the west by Khuzdar, Kalat and Mastung districts. The total area of the district is 7499 Square Kilometers.

1.1.2 Physical Features/Topography

The district consists of both the mountains and the plains. The northern half of the district is dominated by mountains and hills while the southern part is a plane. The mountains are mostly the offshoots of the central Brahui range. The mountains range along the Bolan pass cover a distance of about 90 kilometers from Kolpur in the north to Rindli on the south. The Bolan river passes through this narrow mountain valley. The height varies from 300 to 1200 meters above sea level. The highest point is 2663 meters above sea level.

Apart from the mountains flanking the district on the west, north and north-east, the other important ranges crossing the district are those of Kohan and Bannh. The former is in Dhadar tehsil, running in a north-south direction while the latter in Sanni and Balanari tehsils running from south-west to north-east.

The plain area of the district is in the south-east. The important streams flowing through this area are the Nari and the Bolan. The Nari plain is in the southern and eastern part of the district. It is surrounded on the west by the Branch range. It is formed of alluvial soil. Some parts are non-sandy desert.

1.1.3 Rivers and Stream

The Bolan river rises near Kolpur in the north and flows underground. It appears on the ground near Nari Bolan and again disappears at Aab-i-gum and then rises on the ground where it is joined by the Bibi Nari stream. A weir has recently been constructed on this river, near Dhadar, for irrigation. The Bolan river passes, almost in the centre of the district and enters the district in the north-east from Sibi district. It branches into a number of channels, all passing through the district, in a north to south direction. It joins the main Bolan river near Jalal Khan Chakkar. The Nari river is subject to violent floods which is utilized for irrigation by means of small dams. There are several other rivers and streams some of which have been dammed and the water is used for irrigation.

1.1.4 Climate

The climate of the district is extremely hot in summer and cold in winter. the Bolan plain is the hottest area of the region. Dhadar is one of the hottest places in the province as well as the country. The summer season lasts from April to October. June is the hottest month with mean maximum and minimum temperature of about 46 °C and 31 °C respectively.

The winter season starts from November. Kolpur in the north of the district is situated at a high altitude and is extremely cold where the minimum temperature falls even below freezing point. In the rest of the district, the mean maximum and minimum temperature recorded in the month of January is about 23 °C and 6 °C respectively. The district gets scanty rainfall. In the northern part, the average rainfall is relatively higher as compared to the southern part.

The climate data is not available for Bolan district. Therefore, the mean monthly 30 years maximum and minimum temperature, precipitation and relative humidity recorded at Sibi station close by to Dhadar is given below in the table 1.1:-

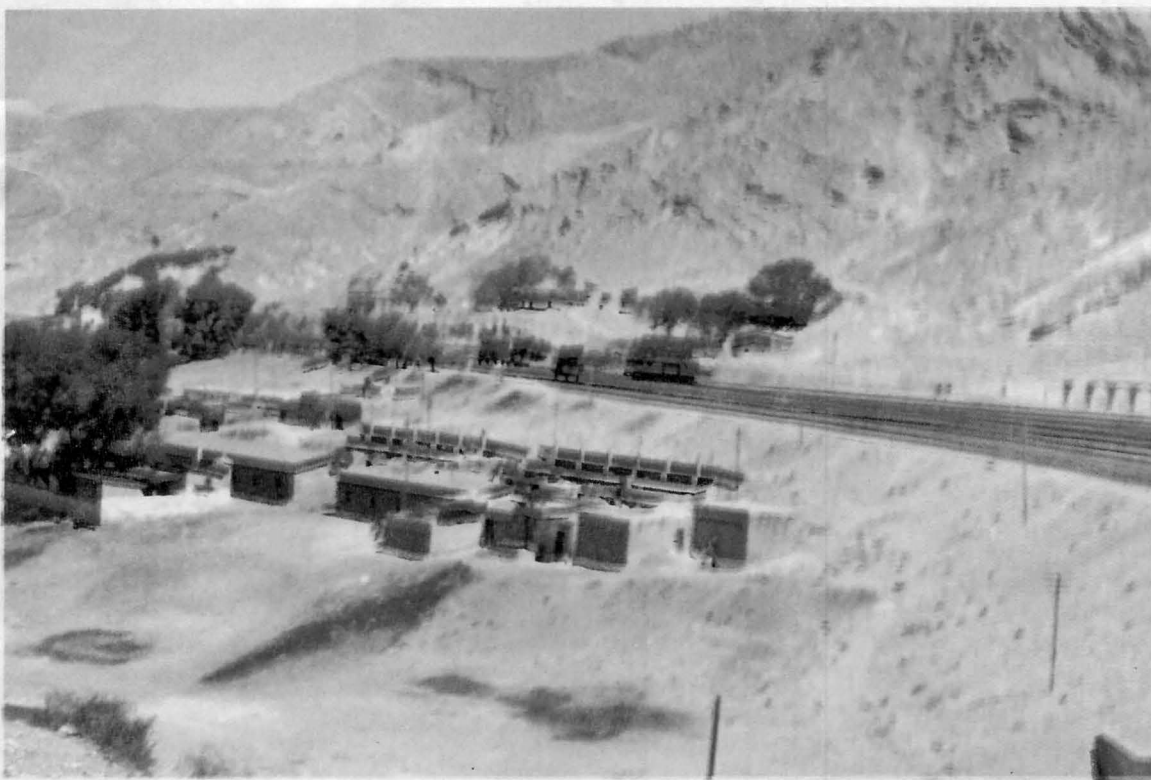

TABLE 1.1: MONTHWISE 30 YEARS MEAN TEMPERATURE, PRECIPITATION AND RELATIVE HUMIDITY RECORDED AT SIBI STATION

1.1.5 Flora

Trees grow all over the district and the common trees are: eucalyptus, *acacia*, *dalbergia*, *zizyphis*, *albizza*, *azadricha*, *prescpis juliflora*, *panicum*, *antidetals* and *alhagae camalorum*.

1.1.6 Fauna

The wild animals of the district includes wolf, jackal, fox, hare and hyaena. The leopard and wolf are found occasionally in Harboi hills. Mountain sheep and straight horned "Markhore" are plentiful in the Harboi hills. Among the non-migratory bird species are the grey partridge, see see and chakor. Migratory birds include the sand grouse, horbara, bustard and duck.

1.2 AGRICULTURE AND RELATED SECTORS

1.2.1 Agriculture

The district has enough agriculturable land but due to scanty rains most part of it is barren. Because of the lack of irrigation facilities the area depends on a single cropping pattern. However, in the areas where adequate water is available for irrigation, mixed cropping pattern is applied. The main crops of the district are wheat and jowar. Mechanised system of cultivation is limited in the district. Some farmers, however, hire out tractors for this purpose. Female participation in agriculture is indirect. Acreage, production and yield of major crops grown in the district for the year 1997-98 is given in table 1.2:-

TABLE 1.2: ACREAGE, PRODUCTION AND YIELD OF MAJOR CROPS GROWN IN BOLAN DISTRICT FOR THE YEAR, 1997-98

1.2.2 Irrigation

The greater part of the district is cultivated through rainfall. If rainfall during the year is below the average then most parts of the district go dry creating famine like conditions. In Khushkaba where no other means of irrigation are available, the partial sowing is done and other land is left to wait for the winter rains. Floods occur after the rains in the rivers and the hill torrents. Wherever the lands are near such rivers or torrents, flood water is conserved by means of small dams called *Gandas* for irrigation. The *Gandas* are built on the Bolan, Nari and Lehri rivers in Bolan district. Tube wells, springs and wells are used for irrigation in some parts of the district.

1.2.3 Horticulture

This sector in the district is not highly developed due to lack of irrigation facilities. Mango, dates, citrus, are grown where water is available. Acreage, production and yield of major fruits grown in the district for the year 1997-98 is as under in table 1.3:-

TABLE 1.3: ACREAGE, PRODUCTION AND YIELD OF MAJOR FRUITS GROWN IN BOLAN DISTRICT, 1997-98

1.2.4 Forestry

An area of about 200 acres in Bolan district is being protected by the forest department. Trees of *kikar*, *khobar*, *kandi*, *sars*, *tali*, *gaz* and *beri* are found every where in the district. However, the forestry is underdeveloping stage. The potential for forestry has not yet been explored. There is no commercial forestry in the district.

1.2.5 Livestock

Camel, bullock, cow, horse, sheep and goat are locally found in the district. Bullock breed especially the "Bhag Nari" is well known and suitable for agriculture and transport purposes. Though under developed, the livestock sector has potential to support the livelihood of the rural population. Women, in particular, are active in the sector in terms of milking, milk processing, clearing the abodes, preparing the fodder and looking after diseases through traditional healing. The role of women in the livestock sector is hardly recognised. Livestock population in Bolan district according to Livestock Census, 1996 is given below in table 1.4:-

There are four veterinary hospitals and four dispensaries in the district.

1.3 INDUSTRY AND TRADE

1.3.1 Industry

There is no organized large scale industry in the district except small scale leather embroidery in Lehri. Gun making is also a traditional industry of Lehri.

1.3.2 Mining

The major mineral resource of the district is coal. The Bolan pass hills have a lot of coal deposits. About a dozen bases of coal mining are being worked around Mach. The limestone potential in Mach area is explored with the number of crush stone machines. The district has a number of other minerals, but these are not explored so far. The district has also a big potential of sulphur and gypsum.

1.3.3 Communication

The national highway from Quetta to Jaccobabad passes through the district as does the railway. Sibi airport is the nearest airport.

The road link from urban to rural areas is not metalled at large. Bullock-carts and camels are used as a mean of transport between urban and rural areas. During heavy rains and floods the communication between villages remains suspended. The main railway line, (Jaccobabad-Quetta) about 140 kilometers long passes through Bolan sub-division and serves Dhadar and Lehri sub-divisions. The main railway stations are Kolpur, Mach, Aab-i-Gum and Bakhtiarabad Domki. In total there are 20 tunnels between Kolpur and Nari bank stations.

Television and radio are commonly in possession of households in towns and villages. There are 30 post offices in the district.

The Bolan district electrification system is linked with two grids of 132 KV at Bhag and Mach. Most of the supply comes from Mach grid station which in turn receives electricity from Guddoo barrage. About 30 percent villages are supplied with electricity.

The gas supply is provided to urban areas and some villages, like Mach, Bhag, Lehri, Bakhtiarabad and Dhadar. After Quetta and Sibi, the district has the largest number of gas connections installed.

1.3.4 Trade and Trade Centres

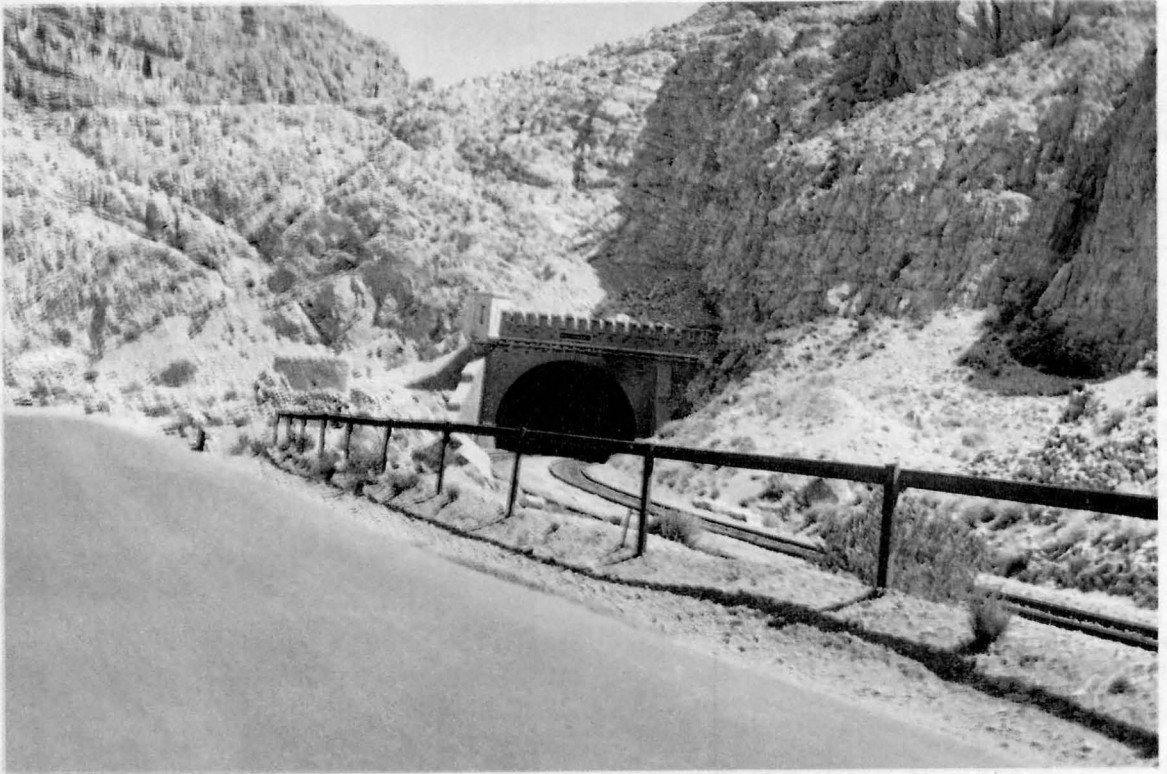

The trade activity in the district is negligible. People meet their requirements by selling jowar, oil seeds, cattles and horses to other districts.

1.4 HISTORY, ETHNICITY/TRIBES AND CULTURE

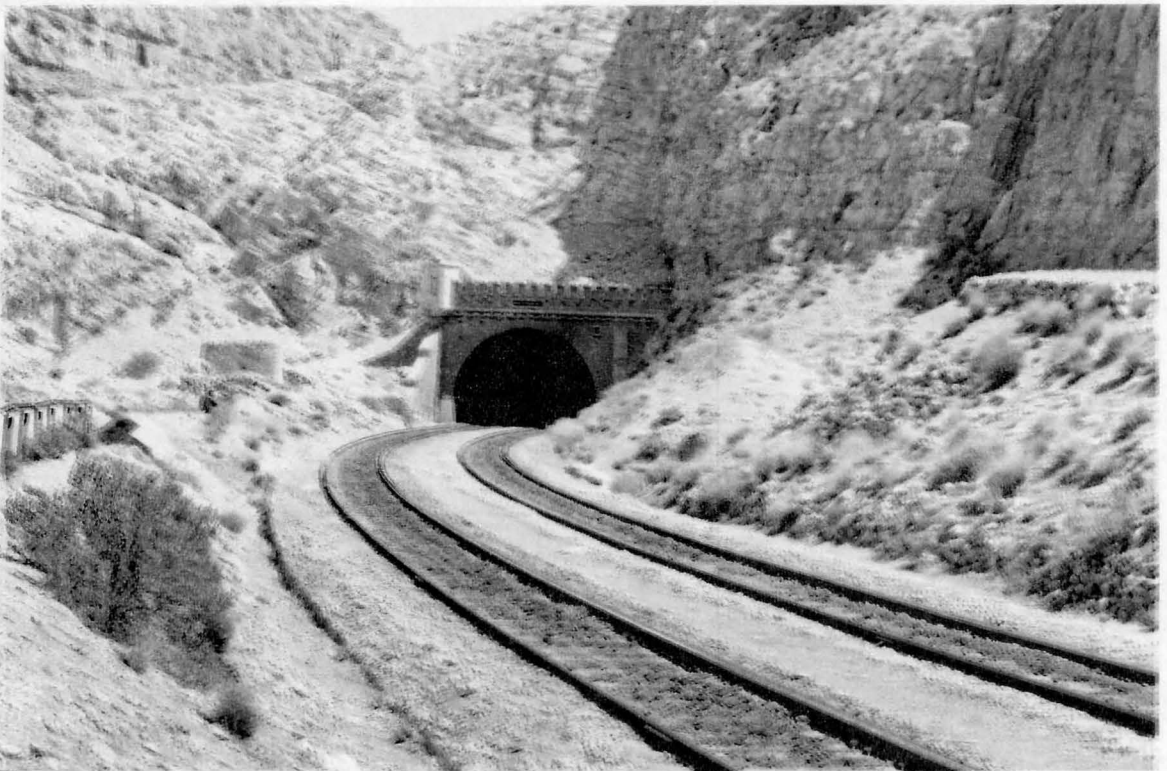

1.4.1 History

The earliest history of the district is shrouded in obscurity and little is known about the period before the advent of the Arabs in the 7th century A.D. In the middle of the 7th century Rai Chach, ruler of Sindh marched from Bela through the central Kalat to Kandabil (present Gandawa).

The ancient home of the Baloch as claimed by them to be Aleppo. Some also claim a Qureshi Arab origin and descent from the Holy Prophet's uncle, Amir Hamza. According to this tradition when the tragedy of Karbala occurred (Hijri 61, about 646 A.D), the progenitor

Road and Railway side by side in Bolan Pass

Railway tunnel in Bolan Pass

of Hazarat Imam Hussain were compelled to leave with his clan from Madina (Saudi Arabia) first to Aleppo and ultimately in Kalat and Kachhi. The Arabs had reached Makran earlier than 711 A.D when Muhammad Bin Qasim conquered the whole of Sindh and Balochistan including Kachhi. The Arab's power lasted till about the end of the tenth century. Afterwards the country is shown as forming part of the empires of the Ghaznavids from whom it passed to the Ghoris. After 1223 A.D the country including the plain of Kachhi was ruled by Sultan Altutmash of Dehli but it appears soon to have reverted to the Mangols. Later-on the Baloch extended their rule to Kachhi and parts of the western Punjab. During the regime of Akbar the Great the area was part of the Mughal empire and from 1638 again remained under the Safavides till the rise of Ghilzai power.

After out-break of the first Afghan War in 1839, the area was traversed by the British army from Sindh and was afterward occupied. In 1840, the Khan Mir Mehrab Khan the ruler was killed fighting at the steps of the Kalat Miri (fortress). His son Mir Nasir Khan II was later raised to the *mosnad* by the tribesmen and regained the possession of Kalat. In 1842, consequent upon the British withdrawal from Afghanistan the occupied area including Kachhi were returned to the Khan of Kalat.

In 1876, Sir Robert Sandeman concluded the agreement with Khan Khuda-e-dad Khan of Kalat and brought Kachhi under strong political control of British empire. In 1883, Quetta Niabat (present Quetta tehsil) and Bolan pass had been permanently leased by the British from Kalat state.

In 1955 with the unification of the former province of the Punjab, NWFP, Sind and Balochistan states, union was merged into one province. Kalat became a separate district and former Kachhi district was a part of Kalat district and from Kachhi district in 1990 two districts "Bolan" and "Jhal Magsi" came into being. The Bolan district started functioning under a District Magistrate from 17th May, 1992.

The economically active population of the Bolan district among the population aged 10 years and above to the total population is 25.16 percent which is 64.58 thousand souls with 98.83 percent male and 1.17 percent female. The remaining 74.84 percent

economically inactive population consists of 32.60 percent children below 10 years, 31.22 percent domestic workers including 65.66 percent female amongst the total females and 1.86 percent male workers amongst total males. The students share is 5.23 percent while all other categories constitute 5.79 percent in the total economically inactive population of the district.

The labour force participation rate as percentage of total labour force to the population aged 10 years and above is computed at 37.32 percent for the district. There is a significant difference in the participation rates between male and female labour force as 67.56 percent for male compared to 1.02 percent for female. The labour force participation rate is higher i.e. 38.77 percent in rural area as compared to 28.57 percent in the urban area. Table 2.9 gives the percentage distribution of population by economic categories.

2.5.2 Un-Employment

The un-employment rate (35.48 percent) as percentage of un-employed labour force(i.e looking for work and laid off) to the total labour force reflects a high degree of un-employment in the district which is much higher for male i.e 35.86 percent compared to female of 5.23 percent. The un-employment rate in the urban areas is relatively higher at 39.66 percent as compared to 34.97 percent in rural areas.

2.5.3 Employed Population by Occupation

Among the employed class in the district the highest percentage 69.20 belongs to Major Occupation Group-6 “skilled agricultural and fishery workers”, followed by Group-9 “elementary occupations” and Group-5 “services workers and shop and market sales workers” comprising 20.88 and 4.81 percent respectively. The next higher is Group-8 “plant and machine operators and assemblers” sharing 1.52 percent. The rest 3.58 percent of the employed population are engaged in the remaining occupational groups.

2.5.4 Employed Population by Industry

Most of the working population i.e 72.19 percent is engaged in the Major Industrial Division-1 “agriculture, forestry, hunting and fishing”. Out of the remaining, 13.05 percent are engaged in Division-9 “community, social and personal services”, 9.05 percent engaged in Major Division-5 “construction”, 2.66 percent associated with Major Division-6 “whole sale and retail trade and restaurants and hotels” and 1.56 percent in Major Division-7 “transport, storage and communication”. The next higher is Major Division-3 “manufacturing” sharing 0.51 percent. The rest 0.99 percent engaged in the remaining industrial divisions.

2.5.5 Employed Population by Employment Status

The proportion of working or employed population (working and un-paid family helper) to population 10 years of age and above is 24.08 percent. Out of this 77.02 percent are self employed, 18.34 percent working as employees (Govt. Autonomous and Private) and 2.57 percent are un-paid family helper. The employer category is only 2.07 percent. If we compare rural/urban variations, the proportion of self employed is higher in rural areas while that of employee (Govt) is higher in urban areas. The percentage of un-paid family helpers is slightly higher in urban areas. Table 2.10 gives percentage of working population by employment status.

2.6 IMMUNIZATION

The question about immunization has been included in the 1998 Population Census for the first time to evaluate the vaccination programme launched by the Government from time to time. It is encouraging to note that 48.99 percent of the children under 10 years age have reported as vaccinated, while 22.76 percent reported as not vaccinated leaving the rest i.e 28.25 reported as not known. The percentage of vaccinated male is slightly higher at 25.50 percent as against vaccinated females at 23.49 percent. Table 2.11 gives detail of immunization by sex and rural/urban area.

The question about National Identity Card was asked in the 1998 Population Census for the first time to see the coverage element of National Identity Card. The question about National Identity Card was asked from population of 18 years age and above. According to the responses to the question it was found that 43.29 percent of the population aged 18 years and above have obtained National Identity Card. It was 51.64 percent for male and 33.72 percent for female. Table 2.12 gives the necessary detail by sex and area.

3. BROAD ANALYSIS OF HOUSING CENSUS DATA

3.1 TYPE OF HOUSING STOCK

3.1.1 Level of Congestion, Persons and Rooms

About thirty three percent of the housing units in the Bolan district are single room houses. The percentage of single room houses is relatively higher at 34.70 in rural areas in comparison to that in urban areas at 21.82 percent. The percentage of housing units with 2 to 4 rooms is higher in urban areas at 70.62 percent as against 60.47 percent in rural areas. Similarly the percentage of houses with 5 or more rooms is higher in urban areas as compared to that in rural areas.

The number of rooms per housing unit is slightly higher in urban areas at 3.32 as against 3.27 in rural areas. Similarly the level of congestion (persons per room) is slightly higher in urban areas as compared to that in rural areas. The level of congestion in terms of persons per housing unit is also higher in urban areas at 8.3 in contrast to 7.2 in rural areas requiring construction of more housing units with additional rooms to reduce the level of congestion. Table 3.1 gives the indices of congestion in 1998 Census.

The district has 82.79 percent housing units having outer walls made of unbaked bricks with earth bonding and 6.49 percent of the houses have the standard pacca walls made of bricks/blocks and stones with cement bonding. There is marked variation in the qualitative indices of construction between urban and rural areas. In urban areas 25.45 percent of the housing units have the standard pacca walls made of baked bricks/blocks and stones with cement bonding, 64.77 percent have walls of un-baked bricks with earth bonding and 6.23 percent have wooden walls while other categories are 3.55 percent. In contrast, the rural areas have 3.91 percent of the walls in the standard category of baked bricks/blocks and stone with cement bonding and 85.26 percent of walls are made of un-baked bricks with mud/earth bonding. The wooden category is 5.58 percent and the un-specified category of material used is 5.26 percent. Table 3.3 gives detail of construction material used in outer walls.

About eighty five percent of the housing units in rural and 71.56 percent in urban areas have used baked bricks supported by girder or wooden log/bamboo in the construction of roofs. Similarly the use of un-specified material in the construction of roofs is higher at 11.77 percent in rural areas as compared to 7.05 percent in urban areas.
