PREFACE

The Fifth Population and Housing Census, initially due in March 1991, was conducted from 2-18 March 1998 throughout the country including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e., from 2nd to 4th March houselisting was carried out where in each house was physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory served as a guideline for the supervisors besides ensuring complete coverage, during the census operation.

There were 3 separate questionnaires used for houselisting and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for houselisting. Form-2 i.e., short form (Annex-B) was used for collection of information about all persons on core questions such as name, relationship with the head of the household, residential status, sex, age, marital status, nationality, religion, mother tongue, literacy, educational attainment and possession of national identity card, number of rooms, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuel used, type of kitchen, bathroom and toilet facilities and watching of TV and radio and reading of newspapers.

Form-2-A i.e., long form (Annex-C) was used for obtaining additional information about migration alongwith its reasons, field of education, economically active population, fertility, disability and inoculation of children against 5 diseases were asked on sample basis. About 8 percent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample. Necessary definitions and concepts relating to the above mentioned questionnaires/forms are given at (Annex-D) for information of the readers.

The report mainly consists of three sections viz write up which carries general description of the district and some analysis of population and housing data, second section comprises tables while third section provides additional information about these sections in the form of annexures.

The write up section contains three main parts viz (i) general description about the district, (ii) broad analysis of population census data and (iii) broad analysis of housing census data. The general description covers location, boundary, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure beside introducing the district. The broad analysis of population census data deal with population size, growth and distribution, other demographic and socio-economic characteristics.

The broad analysis of housing census data throw light on housing units/households, in terms of information on number of rooms, population density per housing unit and per room, tenure, period since constructed, construction material used on walls and roofs, source of drinking water, source of lighting, cooking fuel used in kitchen, availability of kitchen, toilet and bathroom facilities and assessment of media reach etc.

The report comprises 52 tables in all, 40 relate to population data, 12 to housing data. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are given in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the detail occupational groups and industry divisions and district/tehsil map are appended at Annex-E, F & G respectively.

Census taking was a gigantic task which involved the whole nation in one way or the other which is commendable as a team work. The role of Provincial Governments was very vital and with out their active cooperation, the operation would not have been successful. The meritorious services rendered by the field staff in addition to their own jobs, are also appreciable. The services rendered by the staff and officers of Federal Bureau of Statistics in training and data processing was helpful. I am personally indebted to the Federal Government who inculcated in me a sense of responsibility to conduct the census in March 1998, and releasing the data as early as possible for the benefits of all users.

The Armed Forces supported the Population and Housing Census work on hundred percent basis therefore, I extend my gratitude to their officers/staff involved in this operation.

I also thank the International Agencies like UNFPA, UNDP, UNICEF for their financial assistance in acquiring equipment & machinery and technical support in the form of consultancy services, training and study visits abroad.

Finally I thank the officers and staff members of the Population Census Organization for their relentless efforts to complete the census successfully.

PART - I
GENERAL DESCRIPTION OF THE DISTRICT

1. GENERAL DESCRIPTION OF THE DISTRICT

1.1 Geography

1.1.1 Name, Location Boundary and Area

The district derives its name from its headquarters town Badin. It is located between 24° 13' and 25° 12' north latitudes and 68° 21' and 69° 20' east longitudes. It is bounded on the north by Hyderabad district, on the east by Mirpurkhas and Thaparkar districts, on the south by Rann of Kutch which forms international boundary with India, and on the west by Hyderabad and Thatta districts.

The total area of the district is 6726 square kilometres.

1.1.2 Physical Features/Topography

The district is a part of Lower Indus plain formed by the alluvial deposits of the Indus river. Being a vast alluvial plain, its land is very uniform in character and is not diversified by hills or rivers. The southern part of the district is close to the delta of the river Indus and the land surface is, therefore, relatively low as compared to the northern half. The general elevation of the district is about 50 metres above sea level. Clay and sand are principal ingredients of the soil and one of the two factors by which the composition of the various soils is differentiated is the extent to which the clay or the sand predominates. The other criterian of the character of a soil is the presence or absence of natural salts. These occur in every taluka but are formed in greater quantities in the south of the district.

Matli is generally on a higher level than the adjoining talukas of Tando Muhammad Khan (Hyderabad district) and Tando Bago of this district and unlike them presents an uneven surface, long rolling indulation of not great height or depth succeeding each other through a large area from east to west.

Tando Bago is a vast alluvial plain. It is generally low lying and well watered.

The whole taluka of Badin is a rice growing swampy deltaic land impregnated with natural salts.

1.1.3 Rivers and streams

There is no river or stream in the district.

1.1.4 Climate

The climate of the district taken as a whole is moderate, and is tampered by the sea breeze which blows for eight months of the year from March to October, making the hot weather comparatively cool. During the monsoon period, the sky is cloudy, but there is very little precipitation. The climate in summer is generally moist and humid. The cold weather in Badin starts from the begining of November when a sudden change from the moist sea breeze to the dry and cold north-east wind brings about, as a natural consequence, an immediate fall in temperature.

The maximum temperature in the hot weather does not usually exceed 40°C, while the minimum reading in winter does not fall below 8°C. The autumn sets in September and lasts for 1 1/2 months.

Below is the table showing temperature and humidity pattern in the district for the period 1961-90.

1.1.5 Flora

Considering the character of the soil of the district and of the climate the flora cannot be of striking grandeur or beauty. The number of different kinds of grasses and other plants of low growth is considerable. But there are not more than half a dozen species of trees of spontaneous growth. With plenty of water the district might become very fairly wooded. The *kikar* is not uncommon along the canals. The timber of it is used for agricultural implements and as fuel. Its seeds are eaten readily by goats. The bark is used for tanning and in distillation of native spirits. A shrub the *babul (acacia nilatica)* is occasionally seen, it never grows to such a size as would make its timber valuable. The *ber* tree *(zizyphus numularia)* is not uncommon in the cultivated parts of the district. The wood is of a good quality and is used in building. It yields a fine fuel, throwing out a clear heat. Good walking-sticks are got from this tree. *Kandi* is always a small tree, rough and gnarled. The wood is strong and is made into agricultural implements and household furniture. It is much used as a fuel and charcoal is prepared from it which is considered to be inferior quality due to emission of much sparks. The seed vessels called *Singri* are used as an article of food. This tree is met everywhere in the district, where it has not been cleared away.

The *karil (capparis aphylla)* sometimes but seldom becomes a tree. It generally remains mere a shrub. It is found throughout the district, the wood is hard; it is used for rafters and sticks, principally on account of its supposed immunity from the attacks of white ants. As fuel, it has a high reputation. Its fruit is called *dena* and is eaten in its natural state. The fruit of this shrub is a great standby to the poor in season of scarcity. Certain trees are generally grown in the vicinity of each well. The most common are the *pipal* (ficus religiosa) and the sohanjro *(hyperanthera ptery gosperma)* or horse-raddish tree. *Pipal* tree is venerated by Hindus.

Besides these other trees found in the district are tamarisk or jhau *(tamarix lioica)*, poplar or *bahan (populus enphratiea)*, wild copper tree or karib *(caffaris aphylla)*, *pilu (salvadora eleoides)*, *kandi (prosopis spicigera)*, *sissu (dalbergia issoo)*, *nim (melia azadirachta)*, *acasia or siris (acacia lebbek)*, *banian or ber (ficus bengalensis)*, *tamarind or imli (tamarindus indica)*.

There are very few plants other than trees and grasses deserving of much notice. The *sar* is the most important. It is found generally in the sandy soil. It is abundant on the channels of the canals. These are of two kinds: the white topped and the red topped or rather purple topped. The ropes made from the latter are much inferior to those made from the former. Every portion of this reed is used.

1.1.6 Fauna

With the exception of such humbler species as the jackal, *(canis aureus)* wild animals may now be said to be almost non-existent. hyenas *(hyaena hyaenidac)* and wolves *(canis palfipes)* are hardly ever seen; jackals are fairly common, and foxes *(vulpes bengalensis)* are seen in the rapidly contracting area of dry waste. Pig, *(sus cristatus)* though much diminished by the action of villagers in defence of their crops are still found in small numbers. Hares *(lagomorpha lepus)* are fairly common.

Varieties of birds are found in the district includes inter alia winter visiting birds. The most common birds found in the district are black partridge *(francos francolines)*, gray partridge *(francolines pendiceranus)*. white-checked night-angle *(pycnonotus levecogenys)*. Indian great horned owl *(bubo bubo)*. long billed vulture *(gyps indicus)* and other perrial birds.

Among water fowls great flamingo *(phyoenieopterus ruber)* is found in the district. In January 1989 a large concentration of this bird estimated at 40,000 was discovered in Rann of kutch in southern part of Badin district. Beside this other winter visitors birds found in the district are tublet duck *(arthys fulignls)* wagoon *(anas penelope)*, lessucwhinling duck *(ayths yroce)* etc.

A variety of reptiles are also found in the district. The common are cobra *(naja)*, krait *(bangerus scrulus)*. rat snake dhaman *(ptyes mucosud)* and Indian shelled turtle *(fissemgs pumclade)* etc.

1.2 AGRICULTURE AND RELATED SECTORS

1.2.1 Agriculture

Badin, on the whole is a low and flat district. Whole of the district depends for its cultivation on several canals taking off from the Indus river. The net cropped area has increased owing to constant improvement and extension of canals.

Rice is the main crop of the district and is grown where ever the level of the land permits it. The other crops grown in the district are cotton, Jawar, wheat and barley. A statement showing area and production of major crops during 1997-98 is given below:

1.2.2 Irrigation

Badin district is irrigated by the water originating from Sukkur and Kotri barrages. The area being fed by Kotri barrage is further divided into perennial and non-perennial system of irrigation. The irrigation net work mainly comprises of two perennial and two non-perennial canals which is spread all over the district. The particulars of canals, area under command and discharge capacity is shown below:-

1.2.3 Horticulture

A considerable area in Matli taluka is under gardens, the banks of Phuleli canal being studed with them.

Vegetables such as carrot *(daucus carota)*, radish *(raphanus sativus)*, onion *(allium cepa)* etc., are grown. Some fruits like mango *(magnifers indica)*, guava *(psidium guajava)*, melon *(cucumis melo)*, water-melon *(citrullus lanatus)* etc are also produced in the district. 1.2.4 Forestry

Forest growth consists of four chief sorts of trees, namely *acacia arabica* or *babul; propopis specigera* or *kandi; populus euphratica* or *bahan;* and two species of tamarisk, *tamarix gallica* and *dioica*, called lai and jhao respectively. Of these *babul* is the most useful. It yield an excellent timber used extensively for wheels, agricultural implements, building purposes and fuel and in manufacturing coal; a gum which is only slightly inferior to the true gum-arabic; an astringent bark which is used for dyeing and tanning; and pods affording an excellent food for cattle of all kinds. It grows when young in dense unmixed

crops, forming a covering to the ground through which very little sunlight can penetrate, but become thinner naturally as it reaches maturity. It comes up readily from seed and is best regenerated by artificial sowings and has a maximum height of 18 to 24 metres. *Kandi* is next in importance. It yields a good fuel, but is of little use for building or other purposes; the pods are used as fodder for cattle, goats and camels in the same way as those of *babul*. *Bahan* grows in the immediate area of the inundations and yields wood for building and lacquer work. Tamarisk exists chiefly in the new lands thrown up by the Indus, giving a good fuel and wood for agricultural implements and tannery. Tamarisk hardly ever reaches a large size; *bahan* on the other hand, becomes a tree of good diameter and respectable height. *Kandi*, when cut, is immediately attacked by insects and does not last. Tamarisk is liable to attacks of the same sort even when green, and it is difficult to find a sound tree of the species in the forests.

Another tree occurring occasionally in the forests is *dalbergia sissoo* or *tali*. It is found near villages and wells in the revenue lands, and has presumably been planted there by the people because of its valuable timber. The timber is very durable and commands a high price in the market and is known as ''rose-wood''.

Other trees met within forest limits, including useful bushes, are:- *zizyphus jujuba* or *ber*, yielding fodder for goats and camels; *azadirachta indica* or *nim* yielding timber; *albizzia lebak* or *siras; ficus bengalensis, banyan* or *wad*, and *f.religiosa, pipal; tamarindus indica, tamarind; acacia farnesiana, vilayati babul; cordia myza, lasora, and C.rothii, liar; parkinsonia aculeta, villayati kikar; casuarina equisetifolia;* capperis aphylla, kirir and salvadora persica, khabar.

The minor produce from the forests are reeds from *sar* and *kanh grasses (saccharum spontaneum and arundinaceum)*. Reeds are used for blinds, shades and walls for huts and duck boards and for grass for baskets, chairs and ropes. Other grasses are used as fodder for animals. The total area under forest is 12,000 hectares.

1.2.5 Livestock

Good breed of buffaloes and cows, are found in the district. Sheep, goats, camels, horsees, asses and mules are also the main livestock of the district. There is one world-famous live-stock farm at Luari Sharif. In this farm high standard breeding animals are available and this farm had won many prizes in cattle shows organised throughout the country. The number of livestock in the district during 1996-97 is given below:

TABLE : 1.5 LIVESTOCK POPULATION IN BADIN DISTRICT

	Livestock	Number
1.	Cattle	289,346
2.	Buffalo	367,774
3.	Sheep	163,507

7.	Ass	9,007
8.	Mule	27

1.3 INDUSTRY AND TRADE

1.3.1 Industry

Badin being predominantly agricultural area, the available industries are agro based. Presently there are six large scale units engaged in the production of sugar and are providing employment to namely 6,000 persons. Besides there are 12 rice husking mills. There are bright prospects of agro-based and agro allied industry as adequate raw material is available.

1.3.2 Mining

In the year 1981 this district came into lime light when the first oil well at Khaskheli started production. At present four oil fields in Badin under the joint venture with UTP Inc. are producing about half of the total quantity of oil in Pakistan. The gas reserviors have also been struck at some places and Golarchi Gas field has been commissioned.

1.3.3 Trade and Trade Centres

Badin is a trading centre for sugarcane/tomato and fish.

1.3.4 Communications

A comprehensive network of roads exist in the district which caters to the general communication needs and also fulfills the requirements for transportation of sugarcane to the

mills. About 1030 kilometres of pacca roads and 1100 kilometres katcha roads have been constructed in the district. The district headquarters Badin is linked with its taluka headquarters through metalled roads. The China Road Bridge construction company Ltd., has recently constructed a broad way from Badin to Sajawal (50 kilometres).

The district is also served by a railway line which connects Badin with Hyderabad passing through Matli. The postal and telephone facilities available in the district during 1998-99 are as under

1. Higher selection grade post office	01
2. Sub post offices	14

1.4 HISTORY, ETHNICITY/TRIBES AND CULTURE

1.4.1 HISTORY

History of Badin relates with the history of Sindh in general and with the lower Sindh in particular. The area of present day Sindh has remained the centre of ancient Indus Valley Civilization. There is then a gap of more than a millenium before the historical record is renewed. This record is monotonous and of episodic nature. The record shows Sindh annexion to the (Persian) Achaemenid empire under Darius I in the late sixth century B.C. Nearly two centuries later, Alexander the Great conquered the region in 325 and 326 B.C. After his death Sindh came under the domination of empire of Seleucus I Nicator, Chandra Gupta Mauria (C.305 BC), the Indo - Greek and Parathians in the 2nd - 3rd centurey B.C, and the Scythians and the Kushians rulers from about 100 B.C to AD 200. The important influences shaping the progress of Sindh during this long period of time were the gradual decay of Brahmanical system of relegion which in course of time had become excessively sacredotal and ceremonious and getting out of touch with the feelings of common people. During that period the doctrines of Buddhism and Jainism were established and it is certain that Buddhism for many centuries had a profound influence upon the population of Sindh.

From the 3rd to 7th century AD the area remained under Persian Sasanaids. Before Arabs invasion in Sindh, the area was under the rule of Rai dynasty. During that period Brahmanism revival set in and in the second quarter of 7th century AD Brahmanism and Buddhism were confronting each other.

The Arab conquest of Sindh in 711 AD heralded the entry of Islam into the Indian sub-continent. Sindh was part of the administration province of "As Sindh" in the Ummayyad and Abbassid empires from 712 to about 900 AD. With the eventual weakening of central authority in the caliphate, this region came under the control of Ghaznavides.

The area remained under Ghazanavides till 1032 AD when Ibne Sumar, the ruler of Multan laid the foundation of Sumra dynasty in Sindh. The Sumras possibly recognized the soverignty of the Ghaznavides but for all practical purposes were independant. Sindh remained a part of Shahabuddin Ghori's Kingdom and did not cease to be so defacto or dejure, until the erruption of Tamerlane. The Delhi Sultanate over its neighbours and tributory states strengthened and weakened capriciously and local rulers often able to exert a practical, if not a fully recognised sovereignty over their own local areas. During the reign of Altutamish, Sindh came directly under the throne of Delhi. The death of Altutamish in 1236 was followed at Delhi by a succession of plots, mutinees and revolutions equally destitute of present interest and permanent effects. It was evidently real enough to be irksome, for when the house of *Khilji* fell and Ghazi Malik, the strong Governor of Multan left the province to become emperor, the tribe of Sumras occupying the areas about Thatta, took the opportunity to declare their independence. The Sumras dynasty gradually waned in power until 1351 AD when Sammas unseated Soomras and placed "Jam Umar" on the throne in 1451 AD.

In 1526 Mughal Empire was established and in 1592, Akbar the Great established the direct rule of Mughal Empire in Sindh by defeating Mirza Jani Beg, ruler of Thatta. The defeat of Mirza Jani Beg put an end to Tarkhan (Arghun) dynasty and Sindh henceforth became a part of Multan province.

Kalhoras began as petty feudal chiefs became strong enough to be appointed Governors of Sarkars and in the end succeeded in getting the control of upper and lower Sindh with headquarters at Bukkur and Thatta till Nadir Shah's invasion in 1737, they reached a position of virtual independence. The struggle of power between Kalhoras and Talpurs ended in the battle at Halani in which the Talpurs emerged victorious and Kalhora dynasty came to an end and Talpurs came into power in 1783.

Talpur family was divided into three branches (1) The Hyderabad or Shahdadpur family ruling in central Sindh (2) The Mirpur of Manikari family ruling Mirpur and (3) Khairpur or Sohrabani branch governing at Khairpur.

The government of Mirs was unique. It was a kind of family cooperation with no great interest in anything except keeping Sindh isolated and in collecting the revenue. They continued to rule Sindh until the battle of Miani in 1848 when the forces of the Mirs were defeated and Sindh passed under British rule.

The Badin district was formed in 1975 from districts of Hyderabad and Thatta. It consist of five talukas* namely Badin, Shaheed Fazil Rahu (Golarchi), Matli, Tando Bago and Talhar.

1.4.2 Ethnicity and Tribes

Majority of the population is Muslim. The important tribes are Syed, Soomra, Talpur (Mir) Leghari, Memon Mandhra, Sheedi, Mallah Bhurgri. Many races of Baloch are also settled at the scattared places of the district. About 10% of the population of Hindus are found living at the various places of district. New settlers are from Punjab and Balochistan. Afghani and Bengali are also settled here.

The Hindu population of Badin district fall roughly into three main classes: the advanced trading and commercial classes, of whom the Lohana constitute the most important element; the intermediate Hindus where the main element consists of Kolis with a slightly higher standard than the Mahadev kolis who were classed among the primitives. The primitive consist almost wholly of Bhils and Mahadev kolis. The short notes that follow will deal with Lohana and their kindred tribes, the Brahmans, the intermediate kolis, and amongst the primitives the Bhils.

1.4.3 Culture, Customs and Traditions

The customs of visiting *Dargah* (Shrines) of saint is common among the muslim and hindus. According to faith the people visit the *Dargahs* during the time of trouble and misfortune and pray for safety and relief from the worldly affairs/problems. It is therefore, the main cause that Pirs, Sayeds, Shaikhs are considered here as *Murshad* among un-educated masses.

This district has many important *Dargahs*/Shrines such as *Dargah* of *Luari Sharif, Saman Sarkar, Ghulam Shah Qadri, Sajjan Sawai, Dodo soomro, Sawan Fakir, Shah Triat Ahmed Rajo.*

The following festivals/*melas* are being celebrated every year.

1. *Mela* of Saman Sarkar
2. *Mela* of Sajan Sawai
3. *Mela* of Sawan Fakir
4. *Mela* of Ghulam Shah.

* During Census 1998, there were only 4 talukas. Taluka Talhar has been created recently and after the 1998-census.

1.4.4 Food

Rice is the staple food of labour class as well as middle class. The staple food used in rural areas is rice-bread with *lassi*. *Daal*, vegetable or chilly as *chutney* are usually taken in the morning and at lunch. At night rice is generally consumed with *lassi*. Wheat bread is generally used in urban areas. Beef and fish is also taken who can afford it.

1.4.5 Dress and Ornaments

As the great majority of population of the district is agricultural and rural and spends most of its time in the open-air, the question of dress is not one to cause much thinking as to the suitability of, or the need to change the uniform. In fact, the cultivator and the herdsman of this district is most conservative in the matter of dress and the great changes which the last fifty years have seen in all directions throughout the country have very little effect upon the clothing of the agricultural classes, whether *zamindar* or *hari*. Shalwar and Kamiz are the common dresses worn by the people of the district in rural and urban areas. The Hindu ladies do wear *ghagra para* and *sari* commonly instead of *choli* and *shalwar*.

The majority of the people of rural area keep *angocha patka* on head. The women in the town wear ornaments at the occassion of marriage ceremony. The use of silver ornaments is common in the rural area. The Hindu ladies wear silver ornaments permanently. The common ornaments are nose ring, neck ring, *phulri, pazeb, hassi, jhumka choris* etc.

1.4.6 Dwelling

The houses of well-to-do persons in towns are built with pucca bricks and covered with limestones plaster. The persons of average position build their houses with *katcha* bricks and mud. There are sufficient arrangements for drainage, vantilation and lighting. The houses mostly consist of three to six rooms, one hall, verandah, latrine, bathroom and kitchen. One room is also provided mostly to every house as *baithak* or guest room. The houses contain the necessary furniture. The houses in villages are built of *katcha* bricks and covered with timber, wood reeds, and grass. The courtyards are surrounded by fence of thorny bushes. They are built in a haphazard manner and not in compact blocks. The poor peasants and farmers live in huts made of reeds and covered with *sur* grass. There are little arrangements of sanitation and drainage in rural areas.

1.4.7 Occupations

The main occupation of the poeple is agriculture. The women folk in the rural areas help the male members in the fields. As the lands of this district are low lying, therefore numbers of Dhands exist as such a good number of population of *Mallah* community is

engaged in the fishing occupation. The skilled persons are engaged in the administrative and other related jobs. The district being a sugarcane and oil & gas producing state, therefore a good number of people are engaged in mills and oil & gas fields in the district.

1.4.8 Betrothal and Marriges

The marriage ceremonies in the district are similar to those in rest of the province/ country. The approach of the wedding day is heralded by playing drums, blowing pipes/ shehnai. In the betrothal ceremony known as *maja or wanwah* the women from the bride-grome's side go to the house of bride few days before marriage and make the bride *(wana-wah)* to sit in seclusion. She is fed on *churo*, an unleavened cake of wheat flour made into dough with clarified butter and mixed with brown sugar. According to Sir Richard Burton it is a billious mess, popularly supposed to increase the delicacy of the skin. The bride, later goes through other ritual ceremonies like dyeing/decorating hands and soles by *mehndi (henna-lawsonia)*, dyeing the lips with *musag (walnut bark)* and blackening the eyes with *kajal* etc. The occasion of marriage ceremony starts with registration of marriage settlements by the witnesses. After acceptance from both bride and bride-groom, the priest/*Nikkah Khawan* gives a sermons, reciting verses from Holy Quran and ended with prayer/good-wishes.

In matrimonial affairs among the Hindus, particularly Lohanas, the proposal of marriage must come from young lady and not from the swain. The first step towards the celebration of marriage is the ascertainment of a lucky-day. The months of *Sawan and Bhadu* are propitious. *Asu* is not. With respect to other ceremonies, *purohit* must be consulted. When the lucky hour approaches, the bridegroom appears, attired in a wonderfull facade of pasteboard decorated with flowers of colour paper, or sometimes made entirely of silver, called a *mutik*, and mounting on a mare, starts for the bride's house, accompained by his friends, papers, drummers, torch-bearers and men that let off fireworks. At the birde's house he is received with due ceremony into the *angan*, over which a canopy has been erected, where he has a bath and puts on wedding garments presented to him by the bride. The mother of the bride washes his feet with water or milk. Then he goes into the inner chamber, where the women are, and comes out leading his bride by the hand and with the corner of his skirt tied to hers. In some places he does not come out, but the ceremony is performed in the *zanana*. The couple sit on two stools, side by side, with the family or priests in front of them. The priests recite the *sapta-padi* and when the bride and bridegroom walk four times round the sacred fire, on which the priests have already made the *hom* sacrifices. The joining of hands *(hathialo)* and the circuit of the fire *(pheray)* are the essentials of the marriage rite. After it is over gifts are distributed to the relatives and the officiating priests. Then the bridegroom, mounting his mare again, but this time with his wife behind him in a *doli*, goes in joyful procession to his father's house. Next day the father of the bride gives a feast. A hindu as a rule has only one wife, but if she remains long childless, he takes another. Divorce is unknown among them. So is remarriage of widow.

The percentage of educated persons is 24.16 of the population aged 10 years and above, including those below primary. The remaining 75.84 percent either have attained no educational level or never attended any educational institution.

A large variation exists in the ratios of educated persons in rural and urban areas as well as for males and females. Female education is about three times less at 12.44 percent as compared to 34.60 percent male in the district. It is more than double in urban areas at 44.21 percent in comparison to 20.07 percent in rural areas. There is a wide gap between rural and urban females i.e. 8.80 percent in rural and 30.73 percent in urban areas. Table 2.6 gives the ratios of educated persons by sex and rural/urban areas.

2.4 MIGRATION

2.4.1 Migration

Migration data covers movement of population in terms of shifting the residence from one district to another in the same province or from one province to another. It does not cover persons who changed their place of residence within their own district.

2.4.2 Life Time Migrants

The total in-migrants are 24112 i.e. 2.12 percent of the total population in the district. They are 67.93 percent in rural and 32.07 percent in urban areas. The male and female in-migrants are 49.20 and 50.80 percents respectively. The persons who have migrated into the district during the last 5 years i.e. after March, 1993 are 40.23 percent, while 14.12 percent had migrated before 5 years but after 1988. The remaining 45.65 percent had migrated 10 years earlier.

Out of total in-migrants, 12.91 percent migrated into the district as a result of marriage, 53.90 percent moved with head, 10.69 percent due to business and 4.28 percent on account of employment/transfer, 18.21 percent migrated for other reasons.

More than 64 percent of the life-time migrants belong to Sindh with almost same percentages in rural and urban areas. Migrants from Punjab are 15.15 percent, more in rural areas at 17.25 percent compared to 10.72 percent in urban areas. The percentages of migrants from N.W.F.P., Baluchistan and AJK/NA are quite negligible. Persons who have immigrated from other countries are 6.30 percent, more in urban areas at 10.46 percent as against only 4.34 percent in rural areas. A percentage of 9.10 had not reported their previous place of residences. Table 2.8 provides the percentages of in migrants of the district.

2.5 ECONOMIC CHARACTERISTICS

2.5.1 Economically Active Population

Economically active population comprises the persons of either sex who are engaged in some work for pay or profit including un-paid family helpers, persons not working but looking for work as well as those laid off, during the reference period. The economically active population in the district is 17.96 percent of its total population and 26.85 percent of the population aged 10 years and above. The percentage of children below 10 years is 33.11 while 5.70 percent are students and 11.30 percent all others. Among the inactive population 31.93 percent are domestic workers in the district. The activity or participation rates, percentage of population by economic categories and unemployment rates are shown in table 2.9 below:

TABLE: 2.9 PERCENTAGE OF POPULATION BY ECONOMIC CATEGORIES, SEX AND RURAL/URBAN AREAS 1998

Un-Employment Rate	13.61	14.16	2.22	13.64	14.07	3.04	13.47	14.57	0.57

The percentage of economically active population to the total population is termed as crude activity or participation rate while the percentage among population aged 10 years and above is called refined activity or participation rate.

The refined participation or activity rate has been used for analysis purpose. There is a wide variation in the activity rates between males and females as it is 48.38 percent for males as compared to quite negligible 2.65 percent for females resulting in an overall low participation rate. A similar trend in respect of males and females have occurred both in rural and urban areas. The activity rates between rural/urban areas differ as it is 25.91 percent in rural areas as against 31.42 percent in urban areas.

2.5.2 Un-Employment

The un-employment rate is the percentage of un-employed persons (those not working but looking for work and laid off) to the total economically active population in the district. A high rate of un-employment at 13.61 percent has been recorded in the district. It varies for males and females as well as for rural and urban areas. The un-employment rate for males is as high as 14.16 percent as compared to only 2.22 percent for females. Unemployment rate is surprisingly at par at 13.64 percent in rural and 13.47 percent in urban areas. It however widely differs in respect of male and females in rural and urban areas. It is 14.07 percent for males in comparison to 3.04 percent for females in rural areas. In urban areas it is 14.57 percent for males as compared to quite insignificant 0.57 percent for females.

2.5.3 Employed Population by Occupation

Of the total employed population in the district, 65.86 percent is in the major occupation group-6 ''skilled agricultural and fishery workers''. Most of the employed population in this group has been located in rural areas at 80.40 percent. The next higher occupation group at 20.15 percent is of ''elementary occupation'' in the district with a higher percentage of 49.37 in urban areas.

The pattern of occupational status varies significantly between rural and urban areas. In rural areas, most of the employed persons, 56.59 percent are associated with major group-6 ''Skilled Agricultural and Fishery workers'' followed by '' elementary occupations'' at 34.72 percent. In urban area, about 50 percent of the employed class, i.e. 49.37 percent is engaged in major occupation group-9 ''elementary occupation'' followed by ''service workers and shop and market sales workers'' at 13.81 percent.

2.5.4 Employed Population by Industry

Two third of the working population i.e., 65.82 percent is engaged in major division-1 ''agriculture, forestry, hunting and fishing'' most predominant in rural areas at 80.22 percent. A percentage of 11.27 has been reported as a second major division O

''activities not adequately defined''. It has also been reported as second major division both in urban and rural areas. A highest percentage at 28.40 of the working population is related with major division-9 ''community, social and personal services''.

2.5.5 Employed Population by Employment Status.

About two third i.e. 63.62 percent of the employed population mostly in rural areas at 69.92 percent as compared to only 38.21 percent in urban areas. It is worth to mention that most of the self employed are males in the district as well as in rural and urban areas. The next important percentages are unpaid family helpers at 14.96 percent and private employees at 12.62 percent respectively. It is interesting to note that more than 77 percent among unpaid family helpers are females. The same has been reflected in rural and urban areas.

Among the employed population 6.38 percent are govt. employees, 3.76 percent in rural 16.94 percent in urban areas. Percentages of remaining two categories are quite negligible.

2.6 IMMUNIZATION

The question about immunization has been included in the 1998 population census for the first time to evaluate the vaccination programme launched by the government from time to time. It is encouraging to note that 44.37 percent of the children below 10 years age have been reported as vaccinated with considerably higher percentage at 71.13 in urban areas. The percentages of those not known are quite high at 40.80 in the district, 43.34 percent in rural and 26.76 percent in urban areas.

2.7 NATIONAL IDENTITY CARD

The question about national identity card was asked in the 1998 population census for the first time to see the coverage element of I.D.cards. The question about NIC was asked from population aged 18 years and above. According to the responses to the question it was found that 54.10 percent of population aged 18 years and above have obtained NIC. It was 34.62 percent for males and 19.48 percent for females. The variation by gender and area shows that 33.42 percent of rural males have obtained NIC as compared to 18.61 percent of females. The coverage in urban areas is however, higher at 40.61 percent of males as against 23.85 percent for females. Table 2.12 gives necessary details by sex and area.

3.1.1 Level of Congestion-Persons and Rooms

Majority of the housing units in Badin district i.e. 81.82 percent are one room houses. The percentage in rural areas is higher at 84.38 as compared to urban areas at 65.85 percent. Housing units with 2-4 rooms are 17.55 percent in the district which are two times higher at 32.53 percent in urban areas as compared to 15.14 percent in rural areas.

Since most of the housing units are one room houses as such rooms per housing units have been reported as 1.3 in the district, quite low at 1.2 in rural areas and 1.5 in urban areas. Persons per housing unit was 5.3 and persons per room 4.08 in the district. The trend of both of these indicators does not vary much in rural and urban areas. Table 3.1 gives the indices of congestion in 1998 housing census.

Only 1.77 percent of the total houses were under construction. A similar trend prevails in rural areas whereas in urban areas a highest percentage of 52.58 housing units were found built more than 10 years earlier leaving the periods 5-10 years and less than 5 years at 21.38 percent and 23.55 percents respectively. 3.2 HOUSING FACILITIES

3.2.1 Source of Drinking Water

The easy access to potable/safe drinking water is one of the basic human needs. As per information gathered in 1998 housing census, the facility of piped water inside the house is available at 13.00 percent of the housing units in the district. It is much higher in urban areas at 46.12 percent compared to only 7.68 percent in rural areas. Hand pump in side the houses is also fairly being used at 15.73 percent of the housing units, almost double at 25.99 percent in urban areas as compared to 14.03 percent in rural areas.

Hand pump, well and pond are almost equally being used as source of drinking water outside the housing units in the district as well as in rural areas. Use of Well outside the houses is quite negligible at 1.16 percent in urban areas. A majority of the housing units at 34.18 percent are using other sources of drinking water outside the houses. Table 3.5 provides percentage of source of drinking water inside/outside of housing units by rural/ urban.

The question about source of information has been asked for the first time in the 1998 population census to assess the media coverage. About 26 percent of the housing units have access to radio with the same figure in rural and slightly higher at 29.92 percent in urban areas. The coverage of TV and newspaper in urban areas is much higher at 41.38 and 32.37 percents respectively. Table 3.9 provides the data regarding source of information.
