PREFACE

The Fifth Population and Housing Census, due in March 1991, was conducted in March 1998 i.e. after a lapse of 7 years from its due date. The entire country was covered from 2-18 March 1998 including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e. from 2nd to 4th March housing units were physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory also served as a guideline for the supervisors besides ensuring coverage of left out housing units, of listing operation, during the census operation.

Name, age, sex, marital status, educational attainment, relationship with the head of the household, nationality, religion, mother tongue, literacy and possession of National Identity Card were the population topics. Whereas number of households, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuels used, type of kitchen, bathroom and toilet facilities and watching of TV, listening to radio and reading of newspapers were the housing units topics. Besides core questions about migration alongwith its reasons, economically active population, fertility, field of education, disability and inoculation of children against 6 diseases were asked about all persons on sample basis.

There were 3 questionnaires designed for registration of housing units and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for registration of housing units. Form-2 i.e. short form (Annex-B) was used for collection of information about all persons on core questions pointed out in the foregoing paragraph. While remaining topics were inquired on sample basis and Form 2-A i.e. long form (Annex-C) was used. Necessary definitions and concepts relating to the above mentioned questionnaires/ forms are given at (Annex-D) for information of our readers.

About 8 per cent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample.

The report consists of five parts viz(I) Write up which carries some general description of the district, (II) Broad analysis of population census data, (III) Broad analysis of housing census data, (IV) comprises statistical tables while part(V) provides additional information about part I to IV in the form of annexures.

The general description covers location, boundaries, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure, besides introducing the district. The main findings on population characteristics deal with population size, growth and distribution; sex, age and marital

status composition; literacy and educational attainment; economic activities, migration, mother tongue, fertility, disability, possession of National Identity Card, inoculation of children against six diseases and homeless population. Whereas main findings on housing characteristics throw light on housing units/households, information on number of rooms,including population density per housing unit and per room,tenure,period since constructed, construction material used on walls and roofs, source of drinking water,source of light,cooking fuel used in kitchen, availability of kitchen,toilet and bathroom facilities and source of information etc.

Efforts have been made to provide maximum but meaningful data amenable to possible statistical analysis useful for planners, researchers and other users from grass roots to national level. The report comprises 52 tables in all, of which 38 relate to population characteristics, 12 to housing characteristics while two deal with some housing as well as population characteristics. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the details of occupational and industrial groups are appended at Annex-E&F respectively.

Census taking was a gigantic task which involved a large field force drawn from Provincial Government Departments mainly for which active cooperation of concerned officials/officers was highly essential. This report will remain incomplete without acknowledging the efforts made by the field staff, armed forces Jawans and the cooperation extended by their officers especially the Chief Secretary, Punjab and Headquarters Army Air Defence Command Rawalpindi. The credit also goes to officers of Statistics Division and Federal Bureau of Statistics for rendering administrative and technical support. I am personally indebted to the Government who encouraged to conduct the census in March, 1998 and later keen interest taken in releasing the data as early as possible for the benefits of all users. I also thank the donor agencies like UNFPA, UNDP and UNICEF for providing financial assistance in acquiring equipment/machinery and technical support for the conduct of census. It would not be justified to release this report without acknowledging the efforts made by the technical staff of Population Census Organization, in providing technical guidelines, the management services given by the administration, the services support rendered by the secretariat staff.

Despite making the best efforts in producing quality output I believe that there is a great room for improvement, therefore, constructive comments/suggestions from all concerned are welcomed.

PART - I
GENERAL DESCRIPTION
OF THE DISTRICT

1. GENERAL DESCRIPTION OF THE DISTRICT

1.1 INTRODUCTION

The origin of the name Khanewal is obscure. Khanewal Kohna, a small village which is now part of Khanewal city, is named after Khans of the Daha family settled in this area before 1890. The city Khanewal gained greater importance after the construction of Khanewal-Lodhran chord line and establishment of Railway junction at this place. National Highway from Karachi to Peshawar, running through the heart of the district, has further increased its importance.

1.2 LOCATION

The district Khanewal is located in between north latitudes 29° -51' and 30° -43' and east longitudes 71° -30' and 72° -28'.

1.3 BOUNDARIES

The district lies in between a bend made by the rivers with Multan district. It is bounded by Sahiwal and Vehari districts on its eastern side, Jhang and Toba Tek Singh on its north, Multan and Muzaffarabad on its west and Lodhran and Multan districts on its south.

1.4 AREA

District Khanewal is a compact administrative unit which comprises an area of 4,349 square kilometres. It consists of four tehsils namely Jahanian, Khanewal, Kabirwala and Mian Channu.

Further details of the area are as under:

Tehsil	Area (Square kilometres
Jahanian Tehsil	549
Khanewal Tehsil	784
Kabirwala Tehsil	1,804
Mian Channu Tehsil	1,212
Total	4,349

1.5 PHYSICAL FEATURES AND TOPOGRAPHY

1.5.1 Topography

Topography means the degree of unevenness of the land surface. As far as the macro study of the district Khanewal is concerned, there is a remarkable uniformity of physical conditions. The district lies in the upper Indus plains and the present physical features are mainly the result of river action. But at present the typically riverine area is relatively small. Land surface of the whole district, therefore, physiographically lies in the plain region of Pakistan.

1.5.2 Soils

As far as the macro study is concerned, the differences of soil throughout the district are very small. Most of the soil is of alluvial character and sand is found every where with in a few feet below the surface. Scattered sand is also found on the surface at some places which is deposited mainly by the water and wind. But if we go through the micro-study then we find great variations in the soil texture, structure, constituents etc. throughout the district.

1.5.3 Geology

The detailed geological study of the district has not yet been carried out, but a useful sketch may be found in the records of geographical studies.

The district is destitute of mineral wealth. A little Kankar is found here and there on the surface.

1.6 FLORA

The principal trees of the district are the Jand (Prosopis spicigera), Karril (Capparis aphylla), Farash (Tamarix articulata), and Kikar (Acacia arbica). These trees are found all over the area scattered here and there and flourished in the dry arid tracts. The other important trees are Shisham (Dalbergia sissoo), Sirin (Albizzia lebbek), Amb (Mangifera indica), Nim (Melia indica), Piple (Ficus religiosa), Khajji (Phenix doctylifera), Bhan (Populus euphratica), Beri (Zizyphus jajaba) Toot (Morus maraccae) and Bohar (Ficus indica). These trees require a moist soil and are mainly found on moist and irrigated soils. In the area Kikar is the most important and useful to the agriculturist, as its wood is used as beams for roofs, carts, water-lifts and ploughs etc.

Now the irrigated plantations have been introduced in most of the area specially along the banks of canals, agricultural fields and roads etc. Scattered plantation forests are found at various places throughout the district but the largest one is on the north-east of Khanewal city in-between the railway lines running towards Jhang and Sahiwal, forming almost triangular shape.

1.7 FAUNA

In the district, gray partridges are common while black partridges are occasionally found. Wild boar are found along the riverine areas. Sand grouse visit the district during the winter. Quail, plover and pigeons are fairly common. Foxes, hares and jackal are also found every where.

1.8 CLIMATE

1.8.1 Weather

The climate is one of the most important determinants of the human activities. The climate of the district Khanewal is hot and dry in summer and cold in winter. The summer season is lengthy which begins in April and continues till October for about seven months. The hottest months are May, June and July. The mean maximum and minimum temperatures during this period are 42 and 29 centigrades respectively. The winter is pleasant. The coldest months are December, January and February. During this period the mean maximum and mean minimum temperatures are 21 and 5 centigrades respectively. Day temperature in the summer is high but nights are comparatively cool. The hottest day temperature is recorded in the month of June.

A table showing the mean maximum and minimum temperatures and precipitation recorded at the nearest station Multan are given below:

TABLE 1.1 MONTHWISE MEAN TEMPERATURES, PRECIPITATION AND RELATIVE HUMIDITY, 1961-90

Month	Mean Temperature (°C)		Precipitation (millimeters)	Relative Humidity (%)

1.8.2 Rainfall

Most of the rain falls during monsoon season from July to September. Winter rain is very scarce. Annual rainfall is about 16 centimetres.

1.8.3 Wind Storms

In the olden days, dust storms had been one of the chief characteristics of Khanewal district. In recent times, however, the frequency and intensity of wind storms have considerably decreased on account of the extensive agricultural development and plantation of forest in the district.

1.9 ETHNIC STRUCTURE AND HISTORY

1.9.1 History

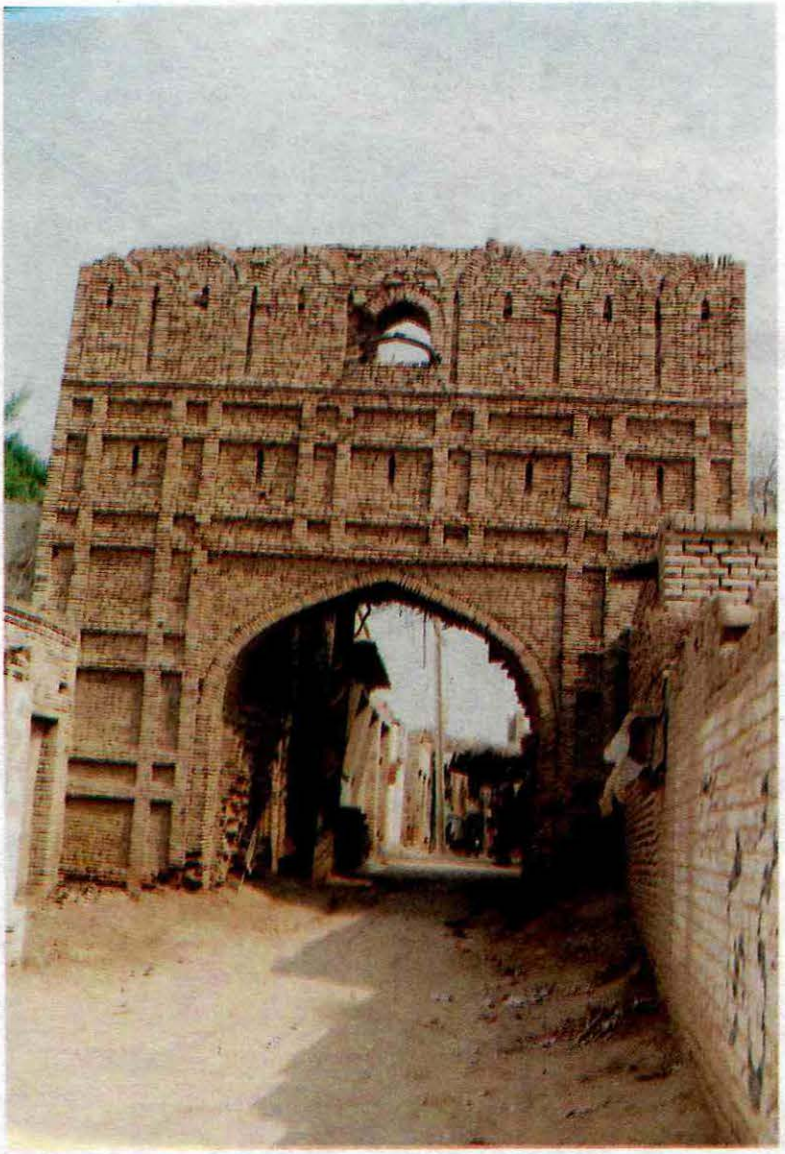
Khanewal an old sub-division of Multan district was upgraded as district with effect from Ist July, 1985 comprising four sub-divisions namely Khanewal, Kabirwala, Mian Channu and Jahanian. Mian Channu sub-division was carved out of old Khanewal sub-division at that time, whereas Kabirwala sub-division as such was attached with the newly created district. Major portion of tehsil Kabirwala and Tulemba are now part of Mian Channu sub-division and are old settled areas along the banks of rivers Ravi and Chenab. In contrast large portion of Mian Channu and Khanewal sub-divisions are colony areas settled after availability of canal water from Lower Bari Doab canal.

The present city of Khanewal was not more than a village before the year 1911 but in the year 1919 it was given the status of an Area Committee which was upgraded as a Municipal Committee in the year 1933.

In the year 1904 a Railway Colony was setup here and Multan Faisalabad Railway line was started. Resultantly it become an important Railway Junction which played an important role in the development of this town.

1.9.2 Races and Tribes

The enthnographic composition of Khanewal district is determined by the fact that it has attracted a large number of immigrants from the surrounding rural areas and from the far off towns on account of the development which took place in response to the construction of Khanewal-Lodhran cord line and establishment of railway junction at this place. Ethnologically, the population of Khanewal district is derived from Semitic or from Indo-Aryan races. This infusion of blood is mainly due to successive encroachment on Multan and influx of refugees after partition.



MAIN GATE OF THE FORT CONSTRUCTED BY NAWAB MUZAFFAR KHAN, RULER OF MULTAN IN THE END OF 18TH CENTURY.

The district has variety of tribes, castes and families, including Dahas and Khaggas in Khanewal tehsil Syeds, Hirajs and Sialsin Kabirwala tehsil Maitlas and Wahlas in Jahanian tehsil and Wyhnes, Qureshis and Bodlas in Mian Channu tehsil.

Besides, in Kabirwala, Khans, Pandas, Pahors and Sahus have a reputation of being the foremost ancient tribes in the tehsil. The earliest land mark of the district is the arrival of the Gardezi Syeds in the twelveth century followed by the Qureshis, who came in the thirteenth century. The Arains appear to have begun migrating from central Punjab about this time. In Taimur's time we find the Khokhars wielding considerable power in the north of Kabirwala but their settlement in the present villages dates from the time of Humayun. Shortly after this, the Langahs, who came from Sibi, started a local dynasty and during the time of Langah supremacy began the incursions of the Baloch from the south. In the reign of Emperor Aurangzeb, arrived the Pathans from Kandhar. The upheaval of the Sials in Jhang drove a section of them from Chiniot into the west of Kabirwala tehsil. After the advent of Sikh power, there was no marked immigration. During the previous hundred years, the main changes in local population have been due to the colonization of the area irrigated by the Sidhnai and Lower Bari Doab canals. Khanewal tehsil is inhabited mainly by colonists, and in the Kabirwala tehsil, settlers from the central Punjab form the important part of population.

1.10 DRAINAGE

1.10.1 Rivers

The whole of the area is an alluvial plain sloping gently from the north-east to the south-west with a slight slope also from north-west to the south-east. Whole of the tract is comparatively recent formation. The geomorphic history of the district is infact the history of its rivers which have made up the formation. The Ravi had different courses in the past. The Sidhnai reach is perfectly a straight cutting about 19 kilometres in length from a little south-west of Tulamba to a little east of Serai Sidhu. The nature of water in Ravi during the winter months has much decreased owing to the supplies taken off by the Bari Doab canal and for the greater part of winter its bed is dry. When there is water in the river, the whole of it is available for irrigation through the head works at Sidhnai.

The Chenab is never dry and never even fordable except in exceptionally dry season. The damage which it used to cause by inundation threatening Khanewal district itself has been stopped by the construction of embankments in the Kabirwala tehsil.

The river enters this district at Baghda village and runs through most of the Kabirwala sub-division. Similarly Jhelum and Chenab after their confluence at Haveli Bahadar Shah (district Jhang) enters Kabirwala near Chowki Moohan.

The Chenab water is more fertilizing but less than the Ravi. The northern and north-western parts of the district receive water from both these rivers.

1.10.2 Nullahs

Amongst the nullahs in the district, the well known is the Nullah Wali Muhammad in the south-western portion of Kabirwala tehsil dug in 1750 A.D. under the orders of Nawab Ali Muhammad Khan the then ruler of Multan.

1.11 CULTURE

1.11.1 Dress

The style of dress amongst all tribes is almost uniform with hardly any tribal peculiarities. An ordinary man in rural area wears Shalwar-Kameez. Mostly the villagers wear shirt known as Chola or Kurta and a waist cloth (Tehband). While educated people in rural areas usually wear Shalwar Kameez. Some rural people use a Rumal or Chaddar on their shoulders. The people living in urban areas usually wear their national dress but some educated persons also use pant shirt. Dress of women consists of the usual Shalwar and Kameez or Kurta, although a Choli or Kurti is also seen in rural areas; over the head and shoulders is worn the Bochan or Dupatta. Pulkari and embroided Chaddars are also used. The women of middle class in towns and well to do class in rural areas observe Pardah and are not seen outside their homes except in white or black Burqa.

1.11.2 Food and Health

The staple food of the people is Roti (bread) made of wheat flour,pulses and rice. The proportion of wheat to other grains consumed has substantially increased during recent years. Seasonal variation in food is also noticeable. Rice is generally eaten in this district. The poorer section of the population sometimes eat Jawar and Bajra when wheat becomes scarce or its prices rise beyond their means. The most prosperous people and those living in town have meat and vegetables with bread. Use of Lassi, milk and Ghee in food is universally popular both in rural and urban areas. Tea has become a popular beverage. Smoking among men is fairly common both in towns and villages but amongst women is rare. Majority of villagers enjoy sound health.

1.11.3 Betrothal

Mostly the marriages are arranged by parents. It seldom happens that the betrothed pair knows each other before marriage. Even if the two happen to know each other the make believe of strangers remains. There is a professional class of women who are experts in the art of match making. The material prosperity of the boy and beauty and efficiency as a house wife of the girl is taken into special consideration.

1.11.4 Marriages

After betrothal a date relating to the lunar calendar is fixed. About two weeks before the wedding day Shadmana begins to play. Two days before the actual ceremony Rasm-e-Mehndi is observed. After Nikah, with a dinner, music and playful songs and dances, the Barat returns. Two days after the marriage the girl returns to her in-laws who come to take her to where now she belongs. Most of the marriages held on 'Watta Satta' or exchange basis.

1.11.5 Births

The birth of a child is celebrated even before the child is born. Pregnancy is received with an aura of mystery around it. A pregnant women is kept, as far as possible, away from all the negative and supernatural influences. The baby in the womb is supposed to take impressions from the things that influence its mother in her period of gestation. In the nineth month Kanji is celebrated. The parents of the woman send bridal clothes and fruits for the expectant mother. When the pregnant woman is in labour various attempts are made to keep evil influences away from her. Chilies are burnt at her door. The birth of a baby is announced and celebrated according to the sex of the new born. If it is a baby boy great festivities begin soon after his birth. The head of the new born is covered with Zafran and his lips are smeared with honey. The grandfather or the Mullah says Azaan (prayer call) in his ears. On the eighth day and in some cases on the twelveth day, after the birth of the baby the mother takes bath and is made to wear her bridal or new dress. About 5 days after the birth of the baby his head is shaved. This event is celebrated with get-together, where the parents can afford, and where they cannot, the occasion is rounded off with the slaughter of the sacrificial lamb. 2.2 SEX, AGE AND MARITAL STATUS

2.2.1 Sex Ratio

Sex ratio, i.e. number of males for every 100 females was 108 per cent recorded in 1998 Census which had decreased from 111 in 1981. The ratio was 108 per cent in rural and 108 in urban area that is the same sex ratio was observed in both the areas.

2.2.2 Age Structure

In 1998 the proportion of the infants under one year was 2.4 per cent, children under 5, 14.3 per cent, children under 10 year 30.1 per cent, under 15 year 43.0 per cent of the total population. Those eligible (i.e. over 18 years) for obtaining National Identity Card represented 52.1 per cent while those eligible for casting vote (i.e. 21 years and above) were 44.0 per cent of the total population. The proportion of population of working age groups i.e. 15 to 64 years, were recorded as 52.9 per cent and over 65 year 4.0 per cent resulting age dependency ratio of 88.9 per cent. Women of reproduction ages i.e. 15 -49 years, were 45.8 per cent of their total population.

The proportion of infants and children under 15 years and population 65 and over were higher in rural areas when compared to population living in towns, resulting high dependency ratio in the former than in the latter areas representing 90.1 and 83.5 per cent respectively. The following table gives percentage of population by selected age groups, sex, urban and rural areas with more detail.

TABLE 2.5 POPULATION PERCENTAGE DISTRIBUTION BY SELECTIVE AGE GROUPS, SEX, AND RURAL/URBAN AREAS, 1998

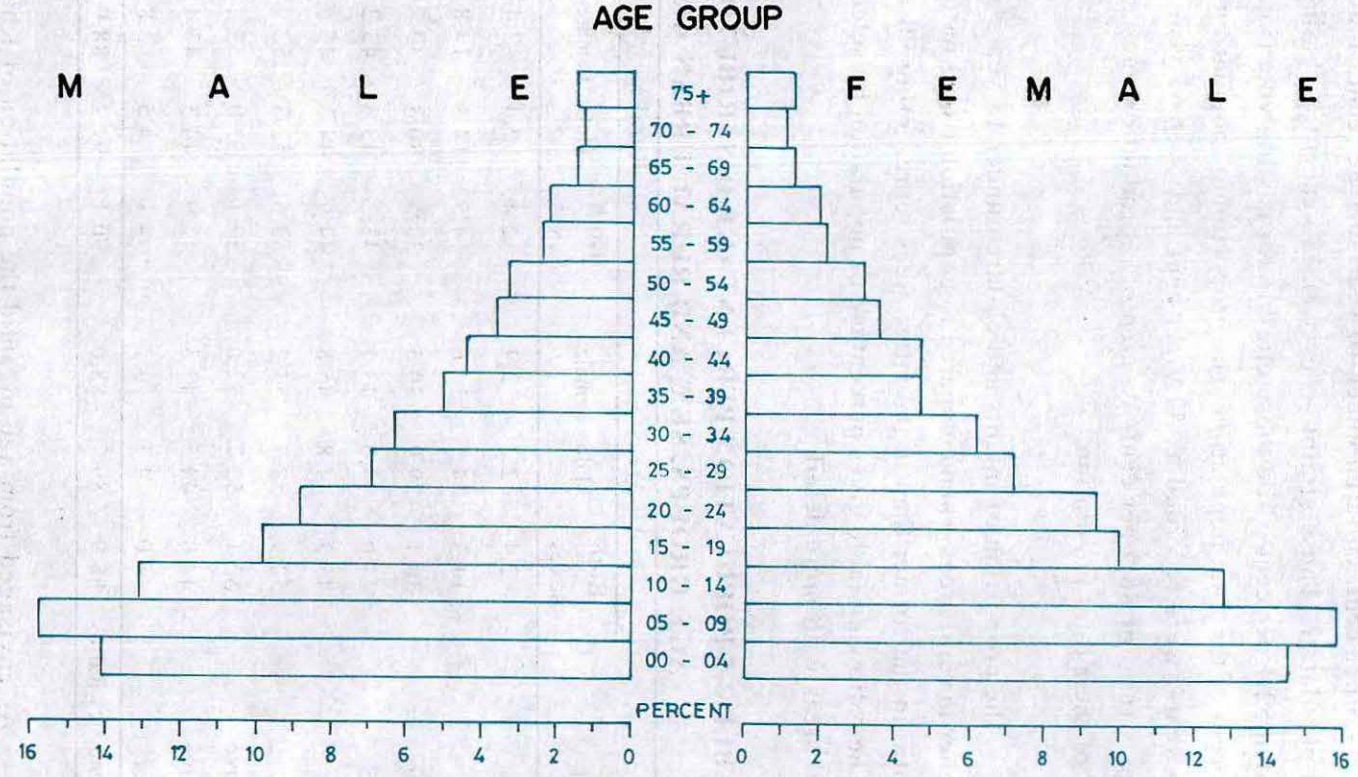
Age dependency Ratio	88.9	89.7	88.0	90.1	91.2	88.9	83.5	83.0	84.0

As envisaged from age pyramid the population of Khanewal district is still very young having broad base implying thereby sustaining of fertility at a very high level. However comparison of age data with the 1981 Census indicates that fertility has started declining resulting reduction in percentage share of children under 5 though the effect of shifting of ages of children under 5, due to misreporting, can not be ruled out. The proportionate share of population declined gradually with advancing in ages and taper off to a narrow peak at age 75 and over.

POPULATION PYRAMID, 1998



2.2.3 Marital Status

The population 15 years and above as enumerated in 1998 Census was further classified into never married, married, widowed and divorced. Of that population 31.7 per cent were never married, 61.7 per cent married, 6.2 per cent widowed and 0.4 per cent divorced. The percentage share of never married male was much higher than the female, being 37.1 and 25.9 per cent respectively. The percentage of never married females was higher in urban than in rural areas implying thereby that fertility must be at lower level in the former than the latter area. Table 2.6 gives details about percentage of population 15 years and above by marital status, sex and rural and urban residence, 1998.

TABLE 2.6 POPULATION PERCENTAGE DISTRIBUTION BY MARITAL STATUS, SEX AND RURAL/URBAN AREAS, 1998

Area	Never Married			Married			Widowed			Divorced		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
All Areas	31.7	37.1	25.9	61.7	58.5	65.1	6.2	4.1	8.4	0.4	0.3	0.6
Rural	30.9	36.3	24.9	62.4	59.2	66.0	6.2	4.2	8.4	0.5	0.3	0.7
Urban	35.6	40.6	30.1	58.2	55.5	61.1	5.9	3.7	8.3	0.4	0.2	0.5

The proportion of never married females has drastically increased since 1981 when it was 18.8 per cent. The increasingproportion is an indication of decline in fertility level which was sustaining at very high level for a long period.

2.2.4 Female of Reproductive Ages by Marital Status

Of the total females population 45.8 per cent are in reproductive ages i.e. 15-49 with slightly more percentage in urban than in rural areas, being 47.3 and 45.5 per cent respectively. As compared to 45.8 per cent of females of reproductive ages as registered in 1998 there were 43.8 per cent in 1981.

Among the females of reproductive ages 31.3 per cent were never married, 65.7 per cent currently married, 2.4 per cent widowed and 0.6 per cent divorced. About 9.2 per cent of ever married females of reproductive ages had no child, 11.0 per cent one child, 12.0 per cent two children, 11.9 per cent three children while 55.9 per cent had more than three children. The proportion of never married females of reproductive ages were high in urban as compared to rural areas.

2.3 LITERACY AND EDUCATIONAL ATTAINMENT

2.3.1 Literacy

A person was treated as literate in 1998 Census if he could read newspaper or a journal of same standard and could write a simple letter in any language. The literacy is measured as the ratio, in percentage, of literate population to corresponding population aged 10 and over. The literacy ratio in the district has increased from 25.6 per cent in 1981, to 39.9 per cent in 1998. The literacy ratio for males is 53.6 per cent as against 25.1 per cent for females. The ratio is much higher in urban when compared with rural areas both for male and female. Table 2.7 shows literacy ratio by rural and urban areas for the year 1981 and 1998.

TABLE 2.7 LITERACY RATIO BY SEX AND RURAL/URBAN AREAS, 1981 AND 1998

Urban	43.4	53.7	31.8	60.8	70.6	50.0

2.3.2 Educational Attainment

The percentage of educated persons, like literacy ratio, has also increased with almost similar pattern but with slightly lower level than level of literacy. Table 2.8 provides some facts by sex in urban and rural areas from the 1998 Census.

TABLE 2.8 EDUCATED PERSONS BY SEX AND RURAL/URBAN AREAS, 1998

Urban	60.3	70.2	49.6

2.3.3 Enrolment Ratio

Enrolment ratio is the proportion, in percentage, of students in population aged 5 to 24. The ratio was 33.1 per cent as measured from 1998 Census data with significant rural urban differential both for males and females. The remarkable differential is between females whose enrolment ratio in urban areas was registered as 44.9 per cent as against their ratio of 22.4 per cent in rural areas, and 39.2 per cent of male ratio in the district as a whole. Table 2.9 provides details by sex in urban and rural areas from the 1998 Census.

Of the total educated persons 21.1 per cent were below primary, 35.2 per cent had passed primary, 21.1 per cent middle, 14.8 per cent matriculate, 4.5 per cent intermediate, 2.2 per cent graduates, 0.7 per cent post graduates while 0.4 per cent were diploma/certificate holders. Regarding sex differential males were more educated and had higher education than females. In urban areas of the district there were around 8.6 thousand graduates while in rural areas 7 to 8 thousand were found with graduate degree.

2.4 MIGRATION

The total number of life time in-migrants in Khanewal district were 168,855 or 8.2 per cent of population of the district. Of total life time in-migrants 39,776 persons settled in the towns. Of total district migrants 64.2 per cent came from other districts of Punjab, 2.4 per cent were from Sindh, NWFP and Baluchistan, while 33.4 per cent were Pakistanis who repatriated from other countries. There is no migrant whose birth place is not reported. Table 2.6 throws light on life time in-migrants with their decomposition by place of origin, and place of settlement in rural and urban areas of the district.

2.5 ECONOMIC CHARACTERISTICS

2.5.1 Economically Active Population

The economically active population is defined here as the persons working, most of the time during the year preceding the census date i.e. 5th March, 1998, looking for work, laid off and un-paid family helpers assisting their family. The economically active population as enumerated in the last census was 25.7 per cent of the total population or 36.8 per cent of the population 10 years and over i.e. the population exposed to the risk of entering the economically active life at any time. The formal percentage is known as Crude Activity Rate (CAR) while the latter is known as Refined Activity Rate (RAR). Of the total male population 48.4 per cent were economically active, while 51.6 per cent not economically active, 29.9 per cent children under 10 years, 12.7 per cent students, 1.7 per cent domestic workers while 7.3 per cent were land lords, property owners, retired persons, disabled etc. The participation rate is lower in urban areas as compared to people living in rural areas. Further details can be seen in Table 2.11 given below:

2.5.2 Unemployment

Unemployment rate is measured as ratio of looking for work and laid off in total economically active population comprising employed, looking for work, laid off and un-paid family helpers, generally representing in percentage. The unemployment rate in the district was 19.6 per cent which was mainly due to unemployment amongst male representing 19.9 per cent. While female unemployment rate was just 4.4 per cent. This is because of their small proportion in their total economically active population. The unemployment rate is higher in urban as compared to rural areas representing 20.6 and 19.4 per cent respectively. The details can be seen in Table 2.11.

2.5.3 Employed Population by Occupation

In 1998 of the total employed persons, 43.0 per cent had skilled agricultural and fishery works. 36.3 per cent had elementary occupations, followed by service workers, shop and market sales workers represented 8.4 per cent, craft and related trade workers, 3.0 per cent. In rural areas people having skilled agricultural and fishery works were again in majority, followed by elementary occupations and service workers, shop and market sales workers, represented 48.8, 33.7 and 6.6 per cent respectively. The highest percentage in urban area is of elementary occupations, followed by service workers, shop and market sales workers and skilled agricultural and fishery workers having 49.5, 17.8 and 13.7 per cent respectively. Further detail is given in Table 2.12.

In 1998 majority of employed persons was working in agriculture, forestry, hunting and fishing industries, followed by construction industries and community, social and personal services industries, representing 51.1, 23.7 and 13.8 per cent respectively. In rural areas 57.5 per cent were working in agriculture, forestry, hunting and fishing industries, 21.5 per cent in construction industries and 12.0 per cent in community, social and personal services industries. While in urban area majority was working in construction industries 35.2 per cent, followed by community, social and personal services industries, 23.0 per cent and agriculture, forestry, hunting and fishing industries, 17.9 per cent and of the employed population. Detailed data are shown in Table 2.13.

2.5.5 Employment Status

Of the total economically active population 91.9 per cent were registered as employed in 1998. Nearly two-thirds i.e. 64.7 per cent were self employed, 18.0 per cent private employees and 7.4 per cent government employees. Un-paid family helpers were recorded as 8.1 per cent. The difference in proportions of employed population were significant between the genders and urban and rural residences. The details can be seen in the table given below:

2.6 IMMUNIZATION

To evaluate vaccination programme the question about immunization of children under 10 years against 6 basic diseases i.e. tuberculosis, diphtheria, pertussis, tetanus, polio and measles was first time enquired through the 1998 Census. As reported in the census nearly 4.8 lacs children were vaccinated representing 77.1 per cent of the total children under 10 years, 5.4 had not been vaccinated while nothing was known about 17.4 per cent children. A better position for vaccination was reported in urban areas where incidence of vaccinated children was 81.3 per cent as compared to 76.3 per cent in rural areas. Also a better rate of vaccination was observed for male children than female children. For further detail data in Table 2.15 can be seen.

2.7 NATIONAL IDENTITY CARD

This question was also asked through the 1998 Census for the first time for evaluating National Registration Scheme introduced in 1973. Of population 18 years and above 60.4 per cent had obtained National Identity Cards and 39.6 had yet to obtain such cards. Male percentage is quite higher as compared to female for obtaining National Identity Card. Their percentage shares were 69.6 and 50.5 per cent respectively. Rural and Urban differential was also reported in obtaining National Identity Cards. Nearly 69 per cent of people in the cities had obtained National Identity Cards while such percentage was under 59 points in rural areas. However, details can be seen in the table given below:

2.8 HOMELESS POPULATION

In the entire district there were only 2,716 persons who had no shelters as reported in 1998 Census. Of these 99.3 per cent were Muslims with majority, 59.7 per cent, never married, 52.6 per cent males while 47.4 per cent females. Of total homeless people 28.7 per cent were in urban areas, 98.7 per cent Muslims. Nearly two-thirds of them were never married, 53.7 per cent males and 46.3 per cent females.

PART - III
BROAD ANALYSIS OF HOUSING CENSUS DATA

3 BROAD ANALYSIS OF HOUSING DATA

3.1 LEVEL OF CONGESTION

Level of congestion of housing units is determined in terms of persons per housing unit, or persons per room or rooms per housing unit.

The number of persons per housing unit has increased from 6.8 in 1980 to 7.0 in 1998 , implying thereby that houses have been congested with time because of slow tempo of construction and high growth rate of population observed during the last decade or so.

The persons per room has decreased from 3.4 in 1980 to 3.0 in 1998 due to increased number of rooms per housing unit from 2.0 to 2.3 during this period. In term of percentage housing units with one room only it has considerably decreased i.e. from 51.2 to 31.2 points while housing units with more than one room have increased from 48.8 in 1980 to 68.8 in 1998. The table given below provides comparative data on congestion from last two censuses.

TABLE 3.1 INDICES OF CONGESTION IN 1980 AND 1998

Index	1980	1998
Persons per Housing Unit	6.8	7.0
Persons Per Room	3.4	3.0
Rooms per Housing Unit	2.0	2.3
Housing Units with one Room (Percentage)	51.2	31.2
Housing Units with 2-4 rooms (Percentage)	45.3	62.6
Housing Units with 5 rooms and more (Percentage)	3.5	6.2

3.2 NATURE OF TENURE

Over 81.3 per cent of the housing units are owned, 2.9 per cent rented while remaining 15.8 per cent rent free. The percentage share of owned housing units has increased from 71.5 per cent since 1980 while rented units and rent free have decreased from 6.2 and 22.3 per cent respectively. Regarding urban/rural differential, the percentage share of owned housing units are 79.6 and 81.6 while those of rented and rent free housing units are 12.0 and 1.0 and 8.4 and 17.4 per cent respectively. Table 3.2 gives detailed data on type of tenure with rural urban break up in 1980 and 1998.

TABLE 3.2 NATURE OF TENURE BY RURAL/URBAN AREAS, 1980 AND 1998

Tenure	All Areas		Rural		Urban

Rented	6.2	2.9	2.4	1.0	17.6	12.0
Rent Free	22.3	15.8	26.7	17.4	9.4	8.4

3.3 PERIOD OF CONSTRUCTION

There has been continuous sharp decline in construction of housing units during the last one decade or so. About 49.8 per cent of housing units were constructed at least 10 years ago, 29.9 per cent during 5 to 10 years before the 1998 Census taking, only 19.7 per cent were constructed during 5 years preceding the census date and hardly 0.6 per cent were constructed during a year before census taking. Almost similar pattern is observed in urban and rural areas except slight variation in their percentage shares.

3.4 CONSTRUCTION MATERIAL OF OUTER WALLS

Un-baked bricks were the main construction material used in construction of outer walls of the buildings. Around 51.7 per cent of such material were used. Baked bricks, cemented blocks and shaped stones were used by 46.2 per cent of the housing units. While wood/bamboo and other construction material were hardly used by 2 per cent. Table 3.3 provides detailed data on construction material used in outer walls with urban rural break up during 1998.

TABLE 3.3 MATERIAL USED IN OUTER WALLS BY RURAL/URBAN AREAS, 1998 (IN PERCENTAGE)

Others	1.3	1.3	1.5

3.5 CONSTRUCTION MATERIAL OF ROOFS

About 54.0 per cent of the housing units used wood/bamboo as construction material in roofs of their buildings, 15.0 per cent housing units used cement or iron sheets and 11.3 per cent used reinforced cement concrete or bricks (RCC/RCB) while remaining have used other construction material. Marked differences are observed in construction materials

between urban and rural housing units though wood/bamboo are still the main material used in both urban and rural areas. There are 42.2 per cent housing units in urban areas and 56.4 per cent in rural areas using such material.

3.6 SOURCE OF DRINKING WATER

Around 13 per cent of the housing units are using piped water, majority of which has that facility in their own houses. A majority is using hand pump for potable water representing 82.5 per cent of total housing units. Just 2.2 per cent households are using potable water taken out from wells. Surprisingly such facility is mostly being availed in urban areas where their percentage share is around 7. Table 3.5 provides details about the source of drinking water with rural and urban break up in 1998.

3.7 SOURCE OF LIGHTING

Predominant housing units are using electricity as source of light representing 56.4 per cent. Kerosine oil is being used by approximately 42.7 per cent of the housing units while other sources of light like patromax, mustard oil etc. are hardly being used by 0.9 per cent of the housing units. Table 3.6 provides, in detail, percentage of housing units by source of light with urban and rural areas in 1998.

3.8 COOKING FUEL USED

About 70 per cent of housing units are using wood as cooking fuel in their houses while nearly 9.2 per cent are using gas for this purpose. Around 21 per cent are using kerosine oil and other sources of cooking fuel in their houses. Regarding urban and rural differential gas is mainly used in urban areas and wood in rural areas representing 50.2 and 75.4 per cent respectively, followed by other material in rural areas and wood in urban areas representing 22.6 and 44.9 per cent housing units respectively. Table 3.7 indicates percentage housing units by source of cooking fuel with urban rural break up in 1998.

3.9 AVAILABILITY OF KITCHEN , BATHROOM AND LATRINE

Separate kitchen, bathroom and latrine are available in 20.6, 28.1 and 21.8 per cent of the housing units respectively. Shared kitchen, bathroom and latrine facilities are available in 10.7, 16.9 and 13.0 per cent of the housing units while remaining have no kitchen, bathroom and latrine facilities in their housing units. Significant differences are observed in rural and urban areas regarding such facilities. The percentage shares of separate kitchen, bathroom and latrine facilities are more in urban as compared to rural areas. While percent-

age shares of non-availability of kitchen, bathroom and latrine facilities are far higher in rural than urban areas which is the characteristic of villagers in developing countries like Pakistan. Table 3.8 gives details on availability of kitchen, bathroom and latrine facilities in housing units by urban and rural residence, 1998.

3.10 SOURCE OF INFORMATION

The question on source of information was asked for the first time in the 1998 Census. There were only three main sources of information enquired through the census. These were watching of T.V., listening to radio and reading of newspapers. Approximately 41 per cent of the households have access to television, radio or newspapers for keeping themselves informed about day to day happenings around them. Over all 69.8 per cent households have T.V facility. About 48.6 per cent of the residents are listening to radio. Nearly 54 per cent of people are reading daily newspapers. Table 3.9 provides further detail on percentage household by source of information at rural and urban residence in 1998.
