PREFACE

The Fifth Population and Housing Census, due in March 1991, was conducted in March 1998 i.e. after a lapse of 7 years from its due date. The entire country was covered from 2-18 March 1998 including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e. from 2nd to 4th March housing units were physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory also served as a guideline for the supervisors besides ensuring coverage of left out housing units, of listing operation, during the census operation.

Name, age, sex, marital status, educational attainment, relationship with the head of the household, nationality, religion, mother tongue, literacy and possession of National Identity Card were the population topics. Whereas number of households, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuels used, type of kitchen, bathroom and toilet facilities and watching of TV, listening to radio and reading of newspapers were the housing units topics. Besides core questions about migration alongwith its reasons, economically active population, fertility, field of education, disability and inoculation of children against 6 diseases were asked about all persons on sample basis.

There were 3 questionnaires designed for registration of housing units and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for registration of housing units. Form-2 i.e. short form (Annex-B) was used for collection of information about all persons on core questions pointed out in the foregoing paragraph. While remaining topics were inquired on sample basis and Form 2-A i.e. long form (Annex-C) was used. Necessary definitions and concepts relating to the above mentioned questionnaires/ forms are given at (Annex-D) for information of our readers.

About 8 per cent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample.

The report consists of five parts viz(I) Write up which carries some general description of the district, (II) Broad analysis of population census data, (III) Broad analysis of housing census data, (IV) comprises statistical tables while part(V) provides additional information about part I to IV in the form of annexures.

The general description covers location, boundaries, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure, besides introducing the district. The main findings on population characteristics deal with population size, growth and distribution; sex, age and marital

status composition; literacy and educational attainment; economic activities, migration, mother tongue, fertility, disability, possession of National Identity Card, inoculation of children against six diseases and homeless population. Whereas main findings on housing characteristics throw light on housing units/households, information on number of rooms,including population density per housing unit and per room,tenure,period since constructed, construction material used on walls and roofs, source of drinking water,source of light,cooking fuel used in kitchen, availability of kitchen,toilet and bathroom facilities and source of information etc.

Efforts have been made to provide maximum but meaningful data amenable to possible statistical analysis useful for planners, researchers and other users from grass roots to national level. The report comprises 52 tables in all, of which 38 relate to population characteristics, 12 to housing characteristics while two deal with some housing as well as population characteristics. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the details of occupational and industrial groups are appended at Annex-E&F respectively.

Census taking was a gigantic task which involved a large field force drawn from Provincial Government Departments mainly for which active cooperation of concerned officials/officers was highly essential. This report will remain incomplete without acknowledging the efforts made by the field staff, armed forces Jawans and the cooperation extended by their officers especially the Chief Secretary, Punjab and Headquarters Army Air Defence Command Rawalpindi. The credit also goes to officers of Statistics Division and Federal Bureau of Statistics for rendering administrative and technical support. I am personally indebted to the Government who encouraged to conduct the census in March, 1998 and later showed keen interest taken in releasing the data as early as possible for the benefits of all users. I also thank the donor agencies like UNFPA, UNDP and UNICEF for providing financial assistance in acquiring equipment/machinery and technical support for the conduct of census. It would not be justified to release this report without acknowledging the efforts made by the technical staff of Population Census Organization, in providing technical guidelines, the management services given by the administration, the services support rendered by the secretariat staff.

Despite making the best efforts in producing quality output I believe that there is great room for improvement, therefore, constructive comments/suggestions from all concerned are welcome.

(KAMRAN ZAFAR)
Chief Census Commissioner

GENERAL DESCRIPTION OF THE DISTRICT

1 GENERAL DESCRIPTION OF THE DISTRICT

1.1 INTRODUCTION

A small town, about 34 kilometres away form Multan, has been historically identified by a shop, called Musan Hatti, which located on Multan-Dera Ghazi Khan road. The Musan Hatti was named Muzaffargarh after appointment of Muzaffar Khan as governer of Multan in 1794. At the time another town Khangarh about 12 kilometres away from Muzaffargarh, had a status of district headquarters. In 1859, it was replaced by Muzaffargarh as its new district hedquarters.

1.2 LOCATION

The district is situated at the distance of 34 kilometres from Multan across the river Chenab on its east. It is bounded by sub-division Chaubara of district Layyah on its north, district Dera Ghazi Khan on its west and districts Bahawalpur and Rahim Yar Khan on its south and south-west respectively.

The district is located between 28° -57' to 30° -46', north latitudes and 70° -30' to 71° -47' east longitudes.

1.3 BOUNDARIES

The district have a tringular block of land situated north and south between the Indus and the Chenab riers, with its base to the north and its apex at the confluence of the Indus and Chenab rivers, the Chenab here riverberates with a liquid dissonent of five rivers of the Punjab. As its boundaries are fixed, a small portion of the district lies on the left bank of the Chenab as well as on the right bank of Indus. On the north, district touches Layyah and Jhang districts. On the east it is greeted by Multan and Bahawalur districts and south by Rahim Yar Khan district.

1.4 AREA

Type of Area	Area (in acres)
Total	2,228,947
Cultivated	831,622
Culturable Waste	495,773
Forest	34,347
Water Logged	867,205

1.5 PHYSICAL FETURES AND TOPOGRAPHY

1.5.1 Physical Features

The northern portion of the district comprises part of the old. Thal desert almost half of which has been brought under cultivation through the construction of the Thal canal. In the remaining major portion of the disrict the old method of irrigation i.e. inundation from the rivers has given way to irrigation by the regular canals. There are two major canal-system in the district excluding the Thal canal. The Muzaffargarh canal originating from the Taunsa barrage irrigates the western portion of the district. Rajanpur canal which originates from the Taunsa Head works irrigates the estern portion of the ditrict.

1.5.2 Topography

River Indus and Chenab flow on its western and eatern sides respectively. The northern part of the district includes Thal desert, almost half of which was brought under cultivation through the construction of Thal canal. Rest of the district almost riverine and receive inundation in some form of the rivers. The riverine part of the district may be further divided into three zones. The first is comparatively narrow strip along both the rivers, where the summer floods are so high tht no Kharif crop can be grown and the Rabi can be matured without irrigation. Inside this zone is the area, where the floods are less violent, and a little Kharif can be grown in the highest lands. The Rabi can be sown on flood water and also needs irrigation unless the rivers are brought to the lands through inundation canals whih has now given way to irrigation by the regular canals. Prominent of these canals are the Muzaffagarh canals from Tanunsa barrage on the Indus and Rangpur canal from Trimu barrage on the Chenab. Canal irrigated lands are protected from river floods by embankments. Prominent of these embankments are one namely Sanwan embankment which has its base on the north of the Layyah, Kot Adu border ends near Jotoi and protects the agricultural lands from the Indus floods, on the side of the Chenab there is a bund near Langr Sarai, another on the east of Muzaffargarh town, another on the east Khangarh and another near Khanwah in the Alipur Tehsil. These embankments are maintained by the Canal Department. This district is divided into four sub-divisions namely, Muzaffargarh, Kot Adu, Alipur and Jatoi.

The eastern side of the district, where the soil has been deposited by the Chenab, is of great natural fertility, the rest of the district is Indus sand,inferior to the Chenab silt, though almost every where good crops can be grown under favourable conditions. The water table is high and where the natural run-way of surface water has been stopped by rialway, roads, canal channels and embankments, is water logged and where water-logging continues for a number of years, saltpetre rises to the surfce and the soil becomes unfit for cultivation.

Historical building of Yaadgar Club (Victoria Memorial Hall), Muzaffargarh.

1.6 FLORA

Among fruit trees, mango, pomegranate, dates, organe and lime are important and are grown in the form of gardens. The mangoes are superior in quality and are largely produced and exported. Mango gardens are common all over the district, but those around the towns of Muzaffargarh, Khangarh and Seetpur are very productive. Date palm is thhe most remarkable plant in the district and its fruit forms staple food during part of the year and poor people particularly subsist on dates for four months. Talhi (Dalbergia sissoo), Kikar, (Acacia arbica), Sharin (Albizzia lebbek),Jand (Prosopis spicigera), Beri (Zizyphus jajaba) and the Phog are the major plants grown all around the district.

1.7 FAUNA

Wild pig is extremely common especially on the banks of the river. Ravine deer is found on the banks of the river Indus. Jackal , fox, and hare are also common. Dove, sparrow, hoopoe, wood packer, pewit, crow and parrot are the common birds of the area.

The common species of birds found in the district are as follows:

Dove	Blue Rock Pigeon
Hoopoes	Sparrow
Kualil	Kingrow (Kal Kurchhi)
Parrot	Egrate & Paddy bird
Kite	King Fisher
Sallow	Amadvat
Coot	Laghar

Climate is extremely hot in summer and cold in winter. The summer from April to September is very hot. The winter from mid November to end of January is sufficiently cold. The spring commences from early February and continues till mid of April. When the temperature starts rising rapidly, the monsoon usually break during July and August, when moderate showers of rain are received. The month of May, June and July are dry and the hotest when the temperature soars upto 51 centigrades, but the nights are comparatively cool and moderately pleasant. The months of December and January are very cool and frosty when the temperture at night drops to the extent of 2 centigrades or even below.

Floods are frequent in both the rivers Chenab and Indus. The older crops are benefitted by these floods and the younger ones ae generally damaged. Owing to close proximity to these rivers the sub-soil water varies from 2.4 to 4.6 metres below the ground during winter season.

1.8.2 Rainfall

District Muzaffargarh receives 21 milimetres average rainfall annually.

1.9 ETHNIC STRUCTURE AND HISTORY

1.9.1 History

Muzaffargarh town was founded in 1794 after the name of first governer of Multan i.e. Muzaffar Khan. Prior to that it is known as 'Musan Hatti'. Muzaffargarh has been made district headquarters on 1859.

Siraiki is the major language of people of the district. However, a number of migrants settled here after independence in 1947, who speak different languages i.e. Urdu, Punjabi etc. After establishment of Thal Development Authoirty, a considerable number of people started to settle down at Muzaffargarh from upper and central Punjab.

1.9.2 Tribes and Races

The entire population of the district is divided into different tribes and races except manials. These tribes and races are Khar, Gurmanies, Qureshi, Jatoi, Dasti, Qalandrani, Hinjra, Langrials, Sheikh (Thaims) Tarragar, Pirhar, Gopang, Bukhari, Gillani, Rajput, Jat, Arain etc. Among migrants famous families are Shairwani, Rajput, Sheikhs, Qureshi etc.

1.11.7 Marriage

In rural area marriges are happened under Watta Satta customs and arranged marriages are generally held throughout the district.

1.11.8 Births

No particular rites are observed on the birth of a girl. When a boy is born, it is customary to bury a knife uprights in the ground near the head of the mat or bed on which the mother lies. The knife is expected to keep away Jinns. The village Moulvi is sent for, and in the child's right ear he repeats the prayer call, and in the left ear he repeats Allah-o-Akbar. This is a religious ceremony. Alms and food are distributed. Before the child is allowed to suck a small quantity of sugar or honey and pounded aniseed called Ghutti is put in his/her mouth by a person of the family possessing good character and accommodating disposition. On the first, or at the latest on the third day after birth, the child is named, after consultation with the Pir, Moulvi and well educated members of the family. Religious ceremony of Aqika is observed by those who are financially of a sound position.

The next ceremony in a child's life is to solemnise hair-trimming. A child's first hair is called Jhand and the act of snipping the hair off is Jhand Lohawan. Some child has its Jhand cut off at the door of the village mosque and this event is called Vadian De Jhand Lohawan to cut off the hair acccording to ancestral custom. It is usually celeberated by the families at a social and festive occasion. In a number of cases, before the child's birth, the parents have made vows to move then one saint to cut off the hair of their newly born baby at shrine. Successive growth of the child's hair are accordingly cut off at the shrine of that saint to whom the parents have vowed. This ritualistic cutting of the hair is called Manat De Jhand Lohawan. Boys are generally circumcised between age 3 months to 10 years. The circumcision is a religious ceremony but the age restriction is not. An early circumcision has a medical backing and is suppose to improve the health of the child. But in all fairness, the medical aspect of circumcision is over stressed and is probably a figment of rural imagination.

Irrigation, Agriculture (Extension and Engineering), Water Management, Co-operative and Agricutlture Development are the government departments engaged in extending facilities/co-operation in the field to help increase in agricultural products and income.

Agriculture (Extension) is busy in educating the growers in the techniques like machines framing, use of fertilizers/pesticides, latest vaiety of seeds and crop rotation in order to achieve optimum productivity of soil. During the current year inspite of untimely rainfalls. 230,306 bales of cotton have been pressed so far consuming the local cotton production. The department is also actively engaged to combat the menace of adulteration in pesticides. The department is also moline through his field staff in arranging cotton and wheat companies under training visit programmes. During such compaign, individiual meetings and group discussion are held, relevant material is distributed among the growers and they are motivated to draw benefit out of one-window scheme launched by the government for Rabi creadit loaning.

The engineering wing of the department is helping the agriculture community in construction of fish ponds, earth water courses and leveling of agriculture land. Its drilling

wing provides subsidies for sinking tube-wells to small farmers. They also provide technical guidance and repairing facilities to tube wells. The department imparts, free of cost, training to the 80/100 children of farmers in the field of tractor operation, tube wells operation and mechanics. The important crops of the district can be observed from Table 1.2.

The proportion of infants and children under 15 years and population 65 and over were higher in rural areas when compared to population living in towns, resulting high dependency ratio in the former than in the latter areas representing 109.2 and 91.6 per cent respectively. The following table gives percentage of population by selective age groups, sex, urban and rural areas with more details.

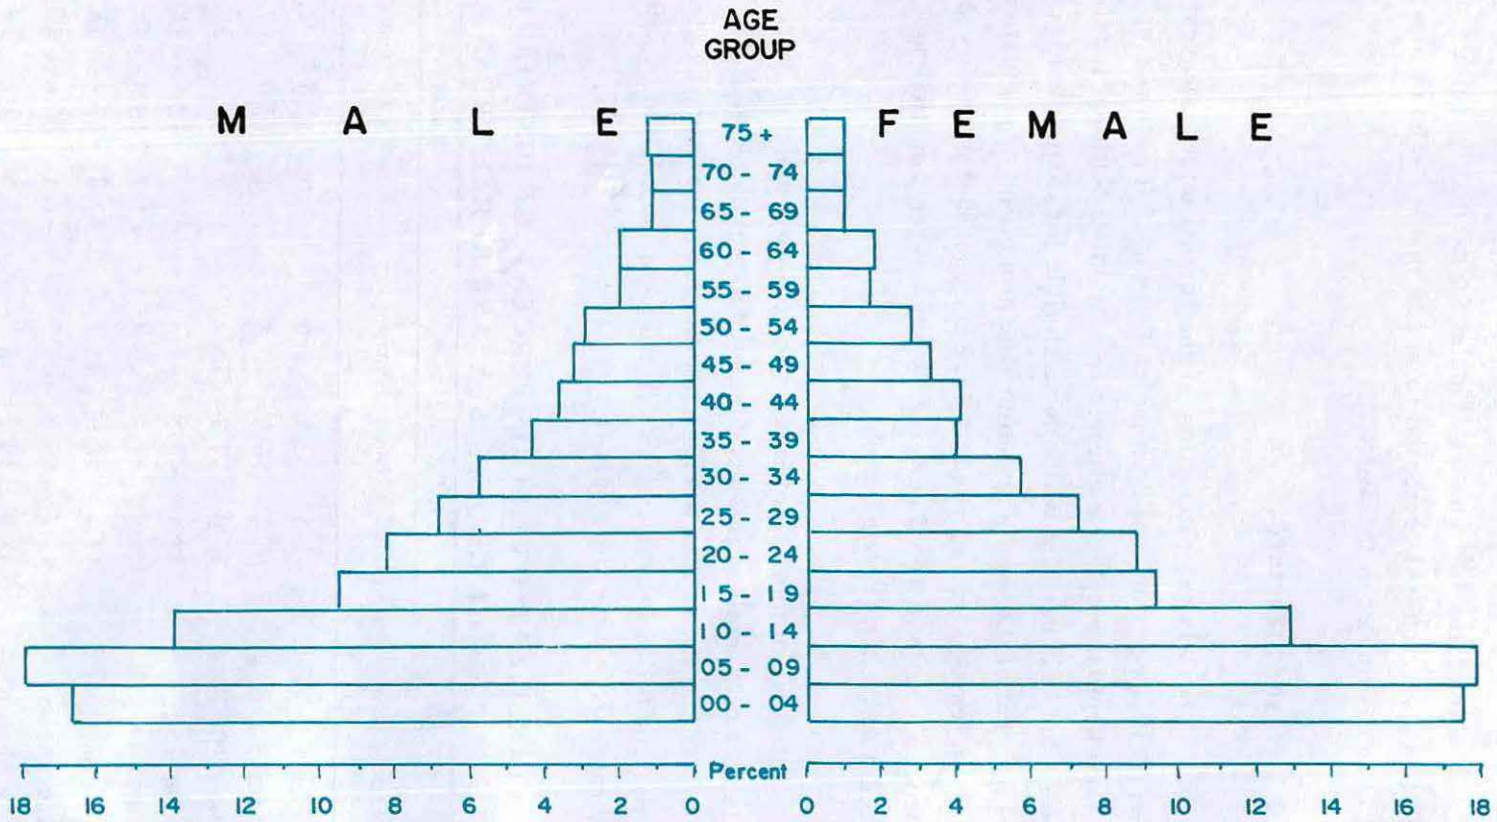
POPULATION PYRAMID - 1998



As envisaged from age pyramid the population of Muzaffargarh district is still very young having broad base implying thereby sustaining of fertility at a very high level. However comparison of age data with the 1981 Census indicates that fertility has started declining resulting reduction in percentage share of children under 5 though the effect of shifting of ages of children under 5, due to misreporting, can not be ruled out, The proportionate share of population declined gradually with advancing in ages and taper off to a narrow peak at age 75 and over.

2.2.3 Marital Status

The population 15 years and above as enumerated in the 1998 Census was further classified into never married, married, widowed and divorced. Of that population 24.1 per cent were never married, 70.1 per cent married, 5.4 per cent widowed and 0.4 per cent divorced. The percentage share of never married male was much higher than the female, being 30.3 and 17.4 per cent respectively. The percentage of never married females was higher in urban than in rural areas implying thereby that fertility must be at lower level in the former than the latter area. Table 2.6 gives details about percentage of population 15 years and above by marital status, sex and rural and urban residence, 1998.

TABLE 2.6 POPULATION PERCENTAGE DISTRIBUTION BY MARITAL STATUS, SEX AND RURAL/URBAN AREAS, 1998

Area	Never Married			Married			Widowed			Divorced		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
All Areas	24.1	30.3	17.4	70.1	66.2	74.3	5.4	3.3	7.7	0.4	0.2	0.5
Rural	22.6	28.8	16.0	71.6	67.7	75.8	5.4	3.4	7.6	0.4	0.2	0.5
Urban	33.4	39.4	26.6	60.8	57.4	64.7	5.5	3.1	8.2	0.3	0.2	0.5

The proportion of never married females has drastically increased since 1981 when it was 18.2 per cent. The increasing proportion is an indication of decline in fertility level which was sustaining at very high level for a long period.

2.2.4 Female of Reproductive Ages by Marital Status

Of the total females population 42.4 per cent are in reproductive ages i.e. 15-49 with far more percentage in urban than in rural areas, being 45.5 and 41.9 per cent respectively. As compared to 42.4 per cent of females of reproductive ages as registered in 1998 there were 41.5 per cent in 1981.

Among the females of reproductive ages 29.1 per cent were never married, 68.9 per cent currently married, 1.7 per cent widowed and 0.3 per cent divorced. About 8.6 per cent of ever married females of reproductive ages had no child, 10.3 per cent one child, 11.1 per cent two children, 11.3 per cent three children while 58.7 per cent had more than three children. The proportion of never married females of reproductive ages were high in urban as compared to rural areas.

2.3 LITERACY AND EDUCATIONAL ATTAINMENT

2.3.1 Literacy

A person was treated as literate in the 1998 Census if he could read a newspaper or a journal of same standard and could write a simple letter in any language. The literacy is measured as the ratio, in percentage, of literate population to corresponding population aged 10 and over. The literacy ratio in the district has increased from 16.8 per cent in 1981, to 28.4 per cent in 1998. The literacy ratio for males is 40.9 per cent as against 14.8 per cent for females. The ratio is much higher in urban when compared with rural areas both for male and female. Table 2.7 shows literacy ratio by rural and urban areas for the year 1981 and 1998.

TABLE 2.7 LITERACY RATIO BY SEX AND RURAL/URBAN AREAS, 1981 AND 1998

Urban	40.3	51.0	27.6	55.5	64.8	44.9

2.3.2 Educational Attainment

The percentage of educated persons, like literacy ratio, has also increased with almost similar pattern but with slightly lower level than level of literacy. Table 2.8 provides some facts by sex in urban and rural areas from the 1998 Census.

2.3.3 Enrolment Ratio

Enrolment ratio is the proportion, in percentage, of students in population aged 5 to 24. The ratio was 23.9 per cent as measured from the 1998 Census data with significant rural urban differential both for the males and females. The remarkable differential is between females whose enrolment ratio in urban areas was registered as 45.1 per cent as against their ratio of 12.8 per cent in rural areas, and 30.2 per cent of male ratio in the district as a whole. Table 2.9 provides details by sex in urban and rural areas from the 1998 Census.

Of total district migrants 74.6 per cent came from other districts of Punjab, 5.5 per cent were from Sindh, NWFP and Balochistan, 0.1 per cent from Northern Areas while remaining 19.8 per cent were Pakistanis who repatriated from other countries. There is no migrant whose birth place is not reported. Table 2.6 throws light on life time in-migrants with their decomposition by place of origin and place of settlement in rural and urban areas of the district.

The formal percentage is known as Crude Activity Rate (CAR) while the latter is known as Refined Activity Rate (RAR). Of the total male population 44.7 per cent were economically active, while 55.3 per cent not economically active, 34.5 per cent children under 10 years, 10.4 per cent students, 1.6 per cent domestic workers while 8.8 per cent were land lords, property owners, retired persons, disabled etc. The participation rate is much higher in urban areas as compared to people living in rural areas. 2.5.2 Unemployment

Unemployment rate is measured as ratio of looking for work and laid off in total economically active population comprising employed, looking for work, laid off and un-paid family helpers, generally representing in percentage. The unemployment rate in the district was 20.9 per cent which was mainly due to unemployment amongst male representing 21.6 per cent. While female unemployment rate was just 1.9 per cent. This is because of their small proportion in their total economically active population. The unemployment rate is higher in rural as compared to urban areas representing 21.0 and 19.5 per cent respectively. The details can be seen in Table 2.11.

2.5.3 Employed Population by Occupations

In 1998 of the total employed persons, 40.0 per cent had skilled agricultural and fishery works. About 38 per cent had elementary occupations, followed by service workers, shop and market sales workers represented 7.7 per cent, craft and related trade workers, 4.8 per cent. In rural areas people having skilled agricultural and fishery works were again in majority, followed by elementary occupations and service workers, shop and market sales workers, represented 43.7, 37.7 and 6.4 per cent respectively. The highest percentage in urban area is of elementary occupations, followed by service workers, shop and market sales workers and skilled agricultural and fishery workers having 39.5, 17.0 and 14.0 per cent respectively. Further details are given in Table 2.12.

In 1998 majority of employed persons was working in agriculture, forestry, hunting and fishing industries, followed by construction industries and community, social and personal services industries, representing 49.8, 24.6 and 13.3 per cent respectively. In rural areas 54.4 per cent were working in agriculture, forestry, hunting and fishing industries, 24.4 per cent in construction industries and 10.5 per cent in community, social and personal services industries. While in urban area majority was working in community, social and personal services industries, 32.2 per cent, followed by construction industries 25.5 per cent, wholesale, retail trade and restaurants and hotels industries 16.9 per cent of the employed population. Detailed data are shown in Table 2.13.

2.5.5 Employment Status

Of the total economically active population 89.3 per cent were registered as employed in 1998. Nearly three-fifths i.e. 60.8 per cent were self employed, 19.5 per cent private employees and 5.0 per cent government employees. Un-paid family helpers were recorded as 10.7 per cent. The difference in proportions of employed population were significant between the genders and urban and rural residences. The details can be seen in the table given below:

2.6 IMMUNIZATION

To evaluate vaccination programme the question about immunization of children under 10 years against 6 basic diseases i.e. tuberculosis, diphtheria, pertussis, tetanus, polio and measles was first time enquired through the 1998 Census. As reported in the census over 6 lacs children were vaccinated representing 65.2 per cent of the total children under 10 years, 18.2 per cent had not been vaccinated while nothing was known about 16.6 per cent children. A slightly better position for vaccination was reported in urban areas where incidence of vaccinated children was 79.5 per cent as compared to 63.4 per cent in rural areas. Also slight better rate of vaccination was observed for male children than female children. For further details data in Table 2.15 can be seen.

2.7 NATIONAL IDENTITY CARD

This question was also asked through the 1998 Census for the first time for evaluating National Registration Scheme introduced in 1973. Of population 18 years and above 59.4 per cent had obtained National Identity Cards and 40.6 had yet to obtain such cards. Male percentage is quite higher as compared to female for obtaining National Identity Card. Their shares were 67.6 and 50.7 per cent respectively. Rural and urban differential was also reported in obtaining National Identity Cards. Nearly 70 per cent of people in the cities had obtained National Identity Cards while such percentage was under 58 points in rural areas. However, details can be seen in the table given below:

2.8 HOMELESS POPULATION

In the entire district there were only 3,784 persons who had no shelters as reported in 1998 Census. Of these 99.7 per cent were Muslims with majority, 62.7 per cent, never married, 52.1 per cent males while 47.9 per cent females. Of total homeless people 22.7 per cent were living in urban areas, almost all Muslims. Nearly two-thirds of them were never married, 50.2 per cent males and 49.8 per cent females.

PART - III
BROAD ANALYSIS OF HOUSING CENSUS DATA

3 BROAD ANALYSIS OF HOUSING DATA

3.1 LEVEL OF CONGESTION

Level of congestion of housing units is determined in terms of persons per housing unit, or persons per room or rooms per housing unit.

The number of persons per housing unit has increased from 6.5 in 1980 to 7.3 in 1998 , implying thereby that houses have been congested with time because of slow tempo of construction and high growth rate of population observed during the last decade or so.

The persons per room has remained the same since 1980 when it was 3.8 but number of rooms per housing unit has increaed from 1.7 to 1.9 during this period. In term of percentage housing units with one room only it has considerably decreased i.e. from 61.1 to 46.2 points while housing units with more than one room have increased from 38.9 in 1980 to 53.8 in 1998. The table given below provides comparative data on congestion from last two censuses.

TABLE 3.1 INDICES OF CONGESTION IN 1980 AND 1998

Index	1980	1998
Persons per Housing Unit	6.5	7.3
Persons Per Room	3.8	3.8
Rooms per Housing Unit	1.7	1.9
Housing Units with one Room (Percentage)	61.1	46.2
Housing Units with 2-4 rooms (Percentage)	36.7	50.0
Housing Units with 5 rooms and more (Percentage)	2.2	3.8

3.2 NATURE OF TENURE

Over 91.1 per cent of the housing units are owned, 2.7 per cent rented while remaining 6.2 per cent rent free. The share of owned housing units and rented units have increased from 84.4 in 1980 to 91.1 per cent in 1998 and 2.4 in 1980 to 2.7 per cent in 1998 respectively while rent free units have decreased from 13.2 to 6.2 per cent during this peropd. Regarding urban/rural differential, the percentage share of owned housing units are 78.6 and 92.9 while those of rented and rent free housing units are 14.7 and 1.0 and 6.7 and 6.1 per cent respectively. Table 3.2 gives detailed data on type of tenure with rural urban break up in 1980 and 1998.

TABLE 3.2 NATURE OF TENURE BY RURAL/URBAN AREAS, 1980 AND 1998

Tenure	All Areas		Rural		Urban

Rented	2.4	2.7	1.0	1.0	15.5	14.7
Rent Free	13.2	6.2	13.9	6.1	6.7	6.7

3.3 PERIOD OF CONSTRUCTION

There has been continuous sharp decline in construction of housing units during the last one decade or so. About 47.8 per cent of housing units were constructed at least 10 years ago, 29.8 per cent during 5 to 10 years before the 1998 Census taking, only 21.9 per cent were constructed during 5 years preceding the census date and hardly 0.5 per cent were constructed during a year before census taking. Almost similar pattern is observed in urban and rural areas except slight variation in their percentage shares.

3.4 CONSTRUCTION MATERIAL OF OUTER WALLS

Unbaked bricks were the main construction material used in construction of outer walls of the buildings. Around 62.2 per cent of such material were used. Baked bricks, cemented blocks and dressed stones were used by 34.8 per cent of the housing units while wood, bamboo and other materials were hardly used by 3 per cent of the housing units. Different pattern is observed in rural and urban areas in use of construction material of walls. Baked bricks, cemented blocks and dressed stones is the principal material in urban areas while unbaked bricks is the main material used in rural areas, being 68.6 and 66.9 per cent respectively. Table 3.3 provides detailed data on construction material used in outer walls with urban rural break up during 1998.

Others	2.0	2.2	0.9

3.5 CONSTRUCTION MATERIAL OF ROOFS

About 5.1 per cent of the housing units used reinforced cement concrete or bricks (RCC/RCB) as construction material in roofs of their buildings, 8.7 per cent housing units used cement or iron sheets and 62.3 per cent used wood/bamboo while remaining have used other construction material. Marked differences are observed in construction materials between urban and rural housing units though the wood/bamboo are the main material used in both areas. There are 56.5 per cent housing units in urban area and 63.2 per cent in rural areas used such material.

3.6 SOURCE OF DRINKING WATER

Around 6.5 per cent of the housing units are using piped water, majority of which has that facility in their own houses. A majority is using hand pump for potable water, 92.4 per cent. Just 0.2 per cent households are using potable water taken out from wells. Table 3.5 provides details about the source of drinking water with rural and urban break up in 1998.

3.7 SOURCE OF LIGHTING

Predominant housing units are using electricity as source of light representing 51.2 per cent of the housing units. Kerosine oil is being used by approximately 47.9 per cent of the housing units while other sources of light like patromax, mustard oil etc. are hardly being used by 0.9 per cent of the housing units. Table 3.6 provides, in detail, percentage of housing units by source of light with urban and rural areas in 1998.

3.8 COOKING FUEL USED

About 78 per cent of housing units are using wood as cooking fuel in their houses while 4.0 per cent are using gas for this purpose. Hardly 1.6 per cent are using kerosine oil. Regarding urban and rural differential wood is mainly used, representing 79.3 per cent in rural and 67.6 per cent in urban areas, followed by other material in rural areas and gas in urban areas representing 18.8 and 27.7 per cent housing units respectively. Table 3.7 indicates percentage housing units by source of cooking fuel with urban rural break up in 1998.

3.9 AVAILABILITY OF KITCHEN , BATHROOM AND LATRINE

Separate kitchen, bathroom and latrine are available in 15.4, 10.1 and 12.1 per cent of the housing units respectively. Shared kitchen, bathroom and latrine facilities are available in 7.9, 6.6 and 6.8 per cent of the housing units while remaining have no kitchen, bathroom and latrine facilities in their housing units. Significant differences are observed in rural and urban areas regarding such facilities. The percentage shares of separate kitchen, bathroom and latrine facilities are far more in urban as compared to rural areas. While percentage shares of non-availability of kitchen, bathroom and latrine facilities are far higher in

rural than urban areas which is the characteristic of villagers in developing countries like Pakistan. Table 3.8 gives details on availability of kitchen, bathroom and latrine facilities in housing units by urban and rural residence, 1998.

3.10 SOURCE OF INFORMATION

The question on source of information was asked for the first time in the 1998 Census. There were only three main sources of information enquired through the census. These were watching of T.V., listening to radio and reading of newspapers. Approximately 30 per cent of the households have access to television, radio or newspapers for keeping themselves informed about day to day happenings around them. Among the T.V, radio and newspaper facilities holders 67.0 per cent of the households have T.V facility, about 54.7 per cent of the residents are listening to radio and nearly 42 per cent of people are reading daily newspapers. Table 3.9 provides further details on percentage households by source of information at rural and urban residence in 1998.
