PREFACE

The Fifth Population and Housing Census, due in March 1991, was conducted in March 1998 i.e. after a lapse of 7 years from its due date. The entire country was covered from 2-18 March 1998 including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e. from 2nd to 4th March housing units were physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory also served as a guideline for the supervisors besides ensuring coverage of left out housing units, of listing operation, during the census operation.

Name, age, sex, marital status, educational attainment, relationship with the head of the household, nationality, religion, mother tongue, literacy and possession of National Identity Card were the population topics. Whereas number of households, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuels used, type of kitchen, bathroom and toilet facilities and watching of TV, listening to radio and reading of newspapers were the housing units topics. Besides core questions about migration alongwith its reasons, economically active population, fertility, field of education, disability and inoculation of children against 6 diseases were asked about all persons on sample basis.

There were 3 questionnaires designed for registration of housing units and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for registration of housing units. Form-2 i.e. short form (Annex-B) was used for collection of information about all persons on core questions pointed out in the foregoing paragraph. While remaining topics were inquired on sample basis and Form 2-A i.e. long form (Annex-C) was used. Necessary definitions and concepts relating to the above mentioned questionnaires/ forms are given at (Annex-D) for information of our readers.

About 8 per cent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample.

The report consists of five parts viz(I) Write up which carries some general description of the district, (II) Broad analysis of population census data, (III) Broad analysis of housing census data, (IV) comprises statistical tables while part(V) provides additional information about part I to IV in the form of annexures.

The general description covers location, boundaries, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure, besides introducing the district. The main findings on population characteristics deal with population size, growth and distribution; sex, age and marital

status composition; literacy and educational attainment; economic activities, migration, mother tongue, fertility, disability, possession of National Identity Card, inoculation of children against six diseases and homeless population. Whereas main findings on housing characteristics throw light on housing units/households, information on number of rooms,including population density per housing unit and per room,tenure,period since constructed, construction material used on walls and roofs, source of drinking water,source of light,cooking fuel used in kitchen, availability of kitchen,toilet and bathroom facilities and source of information etc.

Efforts have been made to provide maximum but meaningful data amenable to possible statistical analysis useful for planners, researchers and other users from grass roots to national level. The report comprises 52 tables in all, of which 38 relate to population characteristics, 12 to housing characteristics while two deal with some housing as well as population characteristics. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the details of occupational and industrial groups are appended at Annex-E&F respectively.

Census taking was a gigantic task which involved a large field force drawn from Provincial Government Departments mainly for which active cooperation of concerned officials/officers was highly essential. This report will remain incomplete without acknowledging the efforts made by the field staff, armed forces Jawans and the cooperation extended by their officers especially the Chief Secretary, Punjab and Headquarters Army Air Defence Command Rawalpindi. The credit also goes to officers of Statistics Division and Federal Bureau of Statistics for rendering administrative and technical support. I am personally indebted to the Government who encouraged to conduct the census in March, 1998 and later keen interest taken in releasing the data as early as possible for the benefits of all users. I also thank the donor agencies like UNFPA, UNDP and UNICEF for providing financial assistance in acquiring equipment/machinery and technical support for the conduct of census. It would not be justified to release this report without acknowledging the efforts made by the technical staff of Population Census Organization, in providing technical guidelines, the management services given by the administration, the services support rendered by the secretariat staff.

Despite making the best efforts in producing quality output I believe that there is a great room for improvement, therefore, constructive comments/suggestions from all concerned are welcomed.

Dated: 7-6-2000.

PART - I
GENERAL DESCRIPTION OF THE DISTRICT

1 GENERAL DESCRIPTION OF THE DISTRICT

1.1 INTRODUCTION

Layyah derives its name from a wild short statured shrub of fuel-wood commonly known as Layyan (Tamarisk dieica). Since the area was first covered by the shrubs (Layyan), this name was accorded by the local population. The district name is also spelled as Leiah. Layyah was given status of district on July 1, 1982, prior to that it was a Tehsil of Muzaffargarh district.

1.2 LOCATION

Layyah district falls in newly created civil division of Dera Ghazi Khan. It lies between 30° -45' to 31° -24' north latitudes and 70° -44' to 71° -50' east longitudes. It consists of a semi rectangular block of sandy land between the Indus and Chenab rivers in Sindh Sagar Doaba.

1.3 BOUNDARIES

In its north, falls the newly established district of Bhakkar which was formerly a sub division of Mianwali district. River Indus runs in its west across which lies district of Dera Ghazi Khan. District Jhang lies in the east and district Muzaffargarh in the south.

1.4 AREA

Total area of the district is 6,291 square kilometres divided into three sub-divisions of Layyah, Karor Lal Esan and Chaubara with 722 revenue estates. It is 88 kilometres wide from east to west and 71.5 kilometres long from north to south.

1.5 TOPOGRAPHY AND PHYSICAL FEATURES

1.5.1 Physical Features

The most conspicuous features resulting in charming scenery of the area are creeks, Dhands and Nullahs of river Indus in the west, lush-green crops, gardens and forests in the irrigated tract of Thal and Barani crops of sandy deserts. Numerous canal channels add to the attractive face of the area. Local scenery is varied with multiple faces, which are peculiar to the plains of the Punjab.

1.5.2 Topography

Most of the area of the district lies between the Indus and the Chenab. The Indus river flows along the western boundary of Layyah district. On the northern boundary of the district the Thal desert rises above the Indus river in a steep cliff about 6 metres in height. In Layyah district the Thal is classified as the Thal Kalan and the Thal Jandi.

The riverine part of the district may be sub-divided into three zones. The first is a narrow strip along the Indus where the summer floods are so high that no Kharif crops can be grown while the Rabi can be matured with well-irrigation. Outside this zone is a second tract where floods are not very high and a little inferior Kharif crops can be grown in the high lands. In the third zone the flood water of the river is brought for irrigation through inundation canals of which the heads are situated on some creeks. Except for the strip of land along the Indus river, the whole of the area was a desert until the construction of the Thal canal, from Jinnah Barrage at Kalabagh on Indus river. Some of the areas formerly covered with sand dunes have been developed by the Thal Development Authority.

Layyah falls in sub-tropical continental plain zone of climatic map of Pakistan. Therefore, the summer days are very hot and winter is cold. In this area wind pressure goes upto 30.2 inches (1,017.4 milibars) in winter season while it is 20.4 inches (994.7 milibars) in summer months. Main controlling factors which shape local climate and weather pattern are:

- General nature of the area i.e. plain in absolute terms.
- Average height above sea-level is 1,525 metres.
- Average west-east gradient is 8 to 16 centimetres per kilometre.
- River effect is quite conspicuous.
- Peculiar configuration of land gives vast scope for weather forces i.e. wind, temperature in stratosphere etc. to play freely.
- Distance from the Arabian sea is more than 700 kilometres.

Dust-storms are common in the months of May, June and July. Some times they begin earlier and last longer. Colonization of the area, ever-increasing vegetation, forest, canal-side plantation and such other factors have reduced intensity and frequency of the dust-storms.

Rains, normally preceded by thunderstorm, are not very sèvere in nature. Some times hail storms damaged crops.

1.5.3 Geology

The area is generally configurated in simple terms of geology and geomorphology. Main features of significance are water bodies of the Indus river, sand dunes of Thal and several creeks/Nullahs pass through the area of the district longitudinally in extreme west, rendering an area of 280 thousand acres, riverineand active flood plains. Sand dunes are quite rampant in Thal portion of the district which vary in size, height, texture, composition and nature of movements.

The area of the district is naturally (i) Nasheb, (ii) Thal and (iii) Sandy. Generally speaking, the area is plain devoid of any conspicuous features such as hills, mountains and big depressions. The western tract locally known as Nasheb, receives inundations from the river Indus. The Thal area does not receive such inundations. The sandy desert area has more conspicuous depth in Chaubara sub-division and south-eastern portion of Layyah sub-division. The riverine (Nasheb) part of the district covers almost 280 thousand acres or 18.0 per cent of the total which can be divided further in the following categories:

- Active flood plains - comparatively narrow all along the river where summer floods are so high that no Kharif crops can be grown.

- Flood Plains-with less violent floods. A little Kharif sowing is possible in comparatively higher strips of land.

- Inundation plains-where the river water is brought through inundation channels.

The Thal is divided into Thal Kalan, Thal Jandi Powah and Dhaha. Sandy desert covers more than 60 per cent of the district area. The surface is uneven due to high sand dunes and ridges varying in the height from 10 to 38 centimetres. It is made up of sands of Indus river, inferior to the silt of Chenab river. Here the water table is quite low.

1.5.4 Minerals

The district is not rich in minerals.

1.6 FLORA

The flora of the district is important. Local irrigation has played a very vital role for the growth of Shesham tree (Dalbergia sissoo) every where in the district. It has its important role in local economy, commerce and trade. Kikar (Acacia arabica) is also found in the district. Its wood is used as fuel. Agricultural implements are also made of Kikar wood. The

Sharin (Albizzia lebbek) is found rarely. The Jand or Kana (Prosopis spicigera) is the commonest tree in this area. The Rakhs are full of it. It is generally saluted because young branches are cut and used as fodder (known locally as Langi) for goats. This tree is considered to be useful for daily life of agricultural families. Beri (Zizyphus jajaba) is a common tree of generally large size. Its fruit (Ber) is eaten by people with charm and attraction. Ber is dried also.

The Lai (Tamarix gallion) called Pilchhi and Jhau grows wildly and spontaneously where ever river water approaches. It is very commonly found along the riverines. It has variety of uses for local people. Its use, as fuel wood, has now considerably decreased as it is being used for basket making and lining of wells etc. The Jal (Salvadora oleoides) is common in Thal and waste lands. Its wood is of no use, however the fruit Pihlun is eaten. Its leaves and twigs serve as fodder for goats and camels.

Apart from the above, the most common fodder plants of the area are Talla or Deb, Chembhar, Madhana, Thir or Makhnala, Lehu, Visal, Sinjhi, Jaudal, Dodhak, Buta, Kan, Khawi, Murak, Jusao, Lana and Jawan or Jawa. The other plants which are actually mere weeds, used as fodder include Kharpal, Munjhar, Savri, Mainon, Bhuk Bathun, Sain, Phit-sain, Patrali, Phuli, Ludri, Budiamasit, Tange Kamali-But, Naun and Hemcha. Non fodder plants include Khip (Orthanthera biminion),Bhakhra or Gokhra (Tribules terestries), Dhamanh (Fagonia cretica), Ratkan, Kaur Tummah (Coloynth gound), Kanderi, Phesak Lani (Soueda fruticosa), Hurmal (Peganum harmala) Lut, Bhuen-phor, Bhuen-phor, Situr (Bonceresia edulis), Chibhar, Jati Musaq, Bhangra, Uthpera Bhukal Bui Khumbi (Mashrooms) and Pad Bahera.

Besides, fodder and non fodder plants, few other trees are also found in area. Pippal (Ficus religiosa) is very rarely found. Bohar (Ficus indica) is enormously shady tree of rare existence. Jaman, basically called Jammun (Engenia jambolana) is a useful tree. Its fruit is used in summer with salt and black pepper.

1.7 FAUNA

Wolves and wild pigs are found almost every where in the district specially on the banks of the river Indus and forests. The only deer in the district are Parha or hog-deer and the ravine deer called Hiran or Chinkara found in Chaubara sub-division waste lands. Hare are found commonly in river inundated strips, which are relatively higher than the surroundings. Jackals and foxes are common in plantation and in the crops along the canals. Hedge-he locally called Jhah are frequently found. The birds such as dove, hoopoe, sparrow, wood packar, peegit, sandpiper, pelican, Indian snake bird, lark, kite, parrot, butchbird, kingrow, swallow, king fisher egrat & pady bir, admadavat, owl, owlet, goat sucker, kurb, shikra, laghar, char chuhernan (Bheri), karwanak, dhing, Bulbul (nightingale), phiddi, dhuri, chhapk Tilyar and Traka are also found. Game birds of the area include Talur (sand grouse), bhattitter, parridges

or Titter (black and bhora). Quails arrive in great numbers in March and September but soon disappear. Wild goose, mallard, the spotted billed duck, hanjhal, gadwall, duck, buar, the marble-backed duck, bhurru, and many others are also seen.

1.8 CLIMATE

1.8.1 Weather

The climate of the district is extremely hot in summer and cold in winter. The summer season begins in April and continues till October. June is the hottest month with mean maximum and minimum temperature of about 42 and 29 degree centigrade respectively. December, January and February are the winter months. The mean maximum and minimum temperatures in January are about 21 and 4 degree centigrade respectively.

The is no meteorological station in Layyah district. Data recorded at Multan which is a nearby district, is given in table 1.1.

1.8.2 Rainfall

The amount of rainfall received in the district is scanty. The occurrence of rainfall has changing pattern from year to year.The distribution and incidence of rainfall is quite regular i.e. it goes along the seasons. Quantity is not much. Average annual rainfall does not exceed 18.7 centimetres of which main downpours are experienced in summer months. Aerial distribution of rainfall is not so clear. It always follows thunder. In April, hail-storms are frequent and quite intense. Weather data of more than seven decades established that the range between maximum and minimum is too great for the average to have any value for meteorological studies of the area. Though annual average rainfall does not exceed 18.7 centimetres yet weather chronicles of this area have recorded some exceptional data also. In 1923-24 Layyah received 20.5 centimetres, 6.0 centimetres in 1927-28, 25.7 centimetres in 1928-29, nil in 1946-47, 31.6 centimetres in 1975-76, 35.2 centimetres in 1977-78, 36.2 centimetres in 1978-79, 36 centimetres in 1980-81, 54.4 centimetres in 1991-92, 30.3 centimetres in 1994-95 and 33.6 centimetres in 1997-98. July/August are the rainiest months while October/November are the driest ones.

1.9 ETHNOGRAPHY AND HISTORY

1.9.1 History

In the past, area of this district remained under Hindu Kingdom of Sindh. For sometime it remained under the rule of Arab conquerors who held Multan as well as Sindh. During 14th century conflict between Sumros and other tribes did not allow local population to establish. After this period of anarchy, the area of Layyah district became subject to the Governors of Mankera who were locally known as Nawabs of the Thal.

In 1550 Kamal Khan Mirrani Baloch founded Layyah. The towns of Naushera and Kot Sultan were also founded during the same period by four sons of Ghazi Khan. The Miranis were finally outsted from Layyah in about 1620 A.D. Layyah remained a part of the Mughal empire till the invasion of Nadir Shah in A.D. 1738. Subsequently this area remained with Jaskanis. They continued to hold Layyah upto 1787 A.D. under a sort of authority exercised by Kaura Mall, Governor of Multan.

Abdul Nabi Serai entered a league with turbulent Sarganis and in 1789 marched against Layyah. Serai's rule was very short as it lasted for three years only but it ended the line of Jaskanis.

Nawab Muhammad Khan Saddozai, a cousin of Muzaffar Khan Nawab of Multan, was appointed Governor of the whole Sindh-Sagar from the Indus to Chenab. He defeated Abdul Nabi Serai and ousted him after a fight. Saddozai was conferred the name of Sarbuland Khan and the Governer of Dera Ismail Khan in addition to what he already held by King Zaman Shah. It is he who is referred to as Nawab of Thal. After the death of Nawab of Thal, in 1821, Ranjit Singh sent a large force and captured the towns of Layyah Bhakkar, Khangarh at Maujgarh (now Chaubara sub-division).

By 1837, Layyah became a part of united kingdom of Diwan Sawan-Mal (died in 1844) Governor of Multan. The Sikh rule ended in Layyah area in 1848 by the campaign of Herbert Edwards, then Assistant to the Resident of Lahore. On 29th March, 1849, with the annexation of Punjab to British empire, Layyah which was a district at that time, also became a part of it. Since then Layyah remained under the control of British government till 1947.

1.9.2 Races and Tribes

Caste is not treated as a religious institution. However, it carries significance of a social factor. The word Zat which is equivalent of caste is used to denote the clan and within a clan strong feelings and prejudices exist. Certain castes are considered to be superior to others. This is also a social and cultural taboo, which has its roots and origins in Hindu social set-up from where it has been borrowed and absorbed in Muslim society, because according to teachings of the Holy Quran, all the followers of the Prophet (Peace be upon him) are equal.

The strata above that of the caste is Kom i.e. tribe to which population with local origin is divided. Each tribe is descended through males from common ancestors. There are sub-divisions within each tribe known as Zat. A Jat (name of tribe) may be a Hinjra, Thind, Khar or alike. These are only narrower
groups of agnates descended through males from less remote ancestor. It is very common to call a person as belonging to a particular clan.

A family known as Jhuga or Ghar is group of agnates descended from a common ancestor within one or two generations, which maintains its family ties in some tangible form. The Jhuga includes the agnates descended through male only, all the females going out of the family are excluded as they are married in other families. The agnatic family is supposed to be the basis of the clans and tribes as they now stand.

The main tribes of the district are Jat, Rajput, Baloch, Pathan, Syed, Qureshi, Sheikh, Awan and Arain.

a) Jat

Major races among Jats are Panwar, Parihar, Chhajra, Daha, Jhakkar, Joiyas, Guraha, Bhatti, Massan, Bhutta, Sahu, Sial, Jangla, Thind, Samtia, Sehar, Sumra and Lohanch. This shows that Jat tribes are exceedingly numerous. Normally the jats marry within their own tribe but they show little hesitation in marrying in other tribes.

b) Baloch

Balochs differ little from Jat with whom they have free intermarriages and social mix-up. Baloch tribes are also quite numerous, but none of them is considered to be prominent on account of descent. Their chief tribes are the Gurmanis, Miranis, Gurchanis, Lashkaranis, Chandia, Hote, Dasti, Goppangs, Kartani, Nutkani, Jatbi, Lagharies, Koras, Jaskanis. The descendants of Jaskani Baloch are now settled at Khokhar Isra in Karor sub-division and Basti Shadu Khan in Layyah sub-division. During the British rule at the time of the Multan campaign and war of independence in 1857, some Jaskani Baloch served the purposes of foreign rulers. They remained more loyal to the foreign rulers than the native freedom movement and the interests of Muslim nation. Mirani Balochs are also found in good numbers in Lohanch Nasheb and Layyah Thal Jandi.

c) Syed

The Syeds are chiefly Bukharis, Gillanis, Rizvis, Hashmis and Shamis. Rich families of Syeds consist of big, usually absentee landlords. Majority of them are care-takers of the shrines and tombs which provide spring-board to them in the fields of politics and social upkeep. The Syed family of Shahpur (Karor sub-division) has been traditionally Peer of large number of Balochs.

d) Pathan

The Popalzai Pathans of village Docharka came to this area at the end of 18th century. The head of the family was Johan Khan who was chief of Ahmad Shah Abdali's forces in this region. Another important Pathan tribe is Nasir. Popalzai are settled in rural areas while Nasirs are found in good numbers in towns. Nasir Pathans generally performed as Qazis as their elders were appointed as Judges during Mughal period. Many of the Popalzai and Nasir Pathans have marked excellent achievements in the fields of education, medicines, agriculture etc.

e) Sheikh

The Sheikhs are in considerable number in Layyah and Karor town of the district. They are chiefly non-agriculturists. Their main field of interest and activity is trade and

commerce. They have a sufficient hold on local business and trade. Functonally they are successors of Hindus in this field.

f) Others

Other tribes include Jhabels, Kihals, Mores and Kutanas. Most important of them are the Jhabels and Kutanas. Jhabels came originally from Sindh. However, it cannot be ascertained as to when did they come. They still speak Sindhi (language which is mixed with Siraiki) and make baskets, but many of them have now marched to the field of agriculture also. The Jhabels are generally religious minded people. The Kihals and Mores are said to be one tribe. They eat crocodiles, tortoises and even wild boars. Muslims do not associate with them. Like Jhabels, they also live by fishing. The Kutanas are said to be Chuhras converted to Islam. They are mainly engaged in sewerage and drainage works and live by cutting of reeds and grass. Some of them are really good experts of reed-work i.e. making of thatched roofs, ropes, reed huts etc.

The pattern of comparative strength of each tribe reveals that Jats are on the top of the list. Then come Baloch, Syed, Pathan and Qureshi. Many of them are found all over the Punjab and their representatives in Layyah district are distinguished by no local peculiarities. The Jats are found in all the three sub-divisions of the district with largest density. However, in Layyah, and then in Karor sub-divisions many of villages have been named after the names of their clans. Balochs are in majority in Nasheb (riverine) area of Layyah and Karor sub-divisions. They are found in larger number in Thal area of Layyah and Chaubara sub-divisions. Syeds are concentrated in northern and southern portions of Layyah and Karor. They are also found in Chaubara sub-division.

1.10 DRAINAGE

1.10.1 Rivers

River Indus runs longitudinally in the western portion with a general east-west direction and enters the district after having traversed Bhakkar district at village Shah Baghwala meet Bakhshinda and leaves its boundary at Mauza Sakhaniwala involving a total distance of about 80 kilometres i.e. less than 3 per cent of the river's total length (2,880 kilometres). It attains an average width of 16-19 kilometres during summer season in Layyah district.

The ordinary dress of an agriculturist is very simple. It consists of Dhoti, a loose-type Kurta and a plain, usually white turban. The shoes are generally made of raw leather in the rural areas while in urban areas fine shoes and coloured-turban are also used by few. Shalwar Kamiz has been the most popular dress both amongst the urban people and the youngsters in the rural areas. The peasant women wears a scarf called Bhochan or Dopatta. In some areas the rural woman wears Dhoti also. Wearing of ornaments by women depends upon the financial condition. Hair style in case of male and female both does not differ from that of other areas of the Punjab.

1.11.2 Food and Health

The people usually take meal twice a day, in rural areas, one before noon, generally at about 10.00 A.M. (Rotivela) in winter and 8.00 A.M. in summer, and the other, just after sunset. Niran, meaning taken on an empty stomach, is the term for early meal taken before night, a glass or two of fresh Lassi (Chachh) and small quantity of butter, it is also called Han or Jhal, as it is supposed to sustain the man upto Rotivela. The Pichhanin is the name for light meal taken in the late afternoon. The staple food grain is wheat. Jowar and Bajra, which used to be staple food in the winter days, about two decades ago does not enjoy that status. In every case the food grain is made into flour and Rotis (bread) are made thereof and eaten with Dal (pulses), vegetables or simply with Lassi (Whey). Meat is also eaten especially in urban areas, but it is available in rural areas also where people like to take beef. Dates are also used very widely. Fresh fruits, imported from other areas, are largely used in urban areas by wealthier people. Lassi (Whey) is a favourite drink of the agriculturist at the day meal. While milk is taken at night if it can be spared. As a rule, the women cook the food with the assistance of daughter, if any, and the whole family messes together. Lesser care is taken of the cleanliness and hygenic use of the food cooking as well eating in rural and by

lower strata of urban population. Breakfast in the strict sense is confined to urban areas especially among the educated people. The business community merely takes the lunch at the shops during the summer.

1.11.3 Health Culture

The population generally enjoy good health. This is mainly because of the arduous life in the rural areas. They are normally of middle height, about 5 feet 6 inches and characterized by a dark-brown complexion, blackish brown eyes, a thick and flat nose and coarse features. The body is well built, the chest and arms are proportionately well developed but the calf muscles are not common. The inhabitants of Thal have a better physique than people living in canal irrigated zones and are supposed to live in better atmosphere today.

1.11.4 Betrothal

Before the observance of process of marriage, the boy's father or guardian sends some relatives to the girls' father or guardian to give message and get his consent. After this, the boy's father and relatives go to the house of girl and take some clothes as well as some ornaments, depending on financial position, for the girl, with some sweets or fruits etc. This stage ends with a formal blessing or Dua-e-kher. In token of the acceptance of proposal by girl's father or guardian a Lungi/Reta (red piece of cloth) and a ring is given for the boy. With this, betrothal becomes complete.

1.11.5 Marriages

Nikah is performed after taking the consent of parties i.e., Ijab-o-Kabul before two witnesses and fixing of dowry. The Nikah is usually performed at night at the occasion of final ceremony when bride is handed over to the parents of the boy in the following morning. But sometimes it is performed before the final occasion of marriage i.e. Rukhsati (departure). The usual procedure at wedding is that the marriage procession (Barat) reaches the bride's house sometime in the evening. Nikah takes place at night or early in the morning. Bride is dressed in red clothes. Sweets or Til and sugar are distributed and then the Barat returns with bride and the bridegroom.

1.11.6 Births

The birth of a child is celebrated even before the child is born. Pregnancy is received with an aura of mystery around it. A pregnant woman is kept as far as possible from all the negative and supernatural influences. In the 9th month Kanji is celebrated. The parents of

the woman send bridal clothes and green fruits for the expectant mother. When the pregnant woman is in labour various attempts are made to keep evil influences away from her. Pepper and chillies are burnt at her door. The birth of the baby is announced and celebrated according to the sex of the new born. If it is a male baby great festivities begin soon after his birth. The head of the new born is covered with Zafraan and his lips are smeared with honey. The grand father or the Mullah says Azaan (call from prayer) in his ears. About 5 days after the birth of the baby his head is shaved. The event is celebrated with a get-together, whether the parents can afford or not the occasion is rounded off with the slaughter of lambs, two in case of male baby and one in case of female baby. Circumcision, in the case of the boy, may take place with the head-shave or may be postponed for quite sometime. Circumcision calls for another feast, the nature of which depends upon the economic status of the family. On the 8th day and in some cases on the 12th day, after the birth of the baby the mother takes bath and is made to wear her bridal or new dress.

1.11.7 Deaths

Alms are given to poor and deserving in case of death, and during the death illness. The dead body is bathed by the Mullah if the deceased was a male otherwise by the female relatives. Then the corpse is dressed in white cloth called Kafan, placed upon a Charpai and covered it with rich cloth called Uchar. The corpse is carried by the relatives and well-wishers on a Charpai to the grave yard and the corpse is burried. The Uchar is given to the grave-digger. No food is cooked that day in the deceased's house, but the friends and relatives send food for whole of the family. Such food is called Kaura - Wata. Visit for condolence, called Mukan or Parchawani, continues for few days.

1.11.8 Superstitions/Beliefs

It would be difficult to find a more superstituious people in the world than the illiterate residents of this district. With the exception of few hundred educated and sensible persons majority of illiterate people with orthodox approach believe in various kinds of activities of djins, evil eyes and many other superstitious concepts. It is commonly believed that "Sap da Khada Bachdae, Nazar da Khada Nahin Bachdae" (The snake bitten survives but one who is affected by evil eyes can not. Generally, the disease and ailment, which are not cured due to poor diagnosis, lack of proper medical treatment or poverty, are supposed to be the acts of djins. Like-wise the marital disputes and unpleasant situations caused by misappropriation of facts, irrational attitudes and unscientific approach towards problems of practical life are attributed to evil eyes of the djins. This is actually a result or escapism that had its deep roots in the local mental and psychological set up. In consequence of this credulousness, the Syeds, Qureshis the keepers of shrines and any impostors who can inspire confi-

dences derive a great trade in selling amulets and acceptance of Nazrana etc. Among various amulets, one is Madhani Da Phull (The charm of the churndasher) This is said to have effect of attracting all the butter in the churns of the neighbours into that of the possessor of the Phull. 1.12 PLACES OF INTEREST

Layyah formerly a sub-division of Mianwali district from 1901 to 1909 was made a sub-division of district Muzaffargarh. Since then it remained as such till it was given the status of a district. On becoming a district, it was attached with the newly created civil division of D.G. Khan. It is divided into three sub-divisions Layyah, Karor and Chaubara.

District Layyah of today is much different from that of older time. Since 1947, Government of Pakistan has taken integrated and consistent steps to transform the area to a developed one. Recent administrative changes, which have revived the old status of the area as a district, with effect from July 1, 1982, signify another march in the same direction. Layyah, Karor, Chaubara, Fatehpur, Chauk Azam, Kot Sultan and

Nawan Kot are the important places of the district. The mud forts of Karor, Chaubara and Nawankot date back to Ranjit Singh's times are also worth mentioning. There are many shrines in the district. The oldest and most important shrine is that of Karor Lal Esan at Karor town. A ten days fair takes place every year on 14th Bhadon which is participated and attended by thousands of followers from all over the Punjab. It has become a big commercial activity in this area.

Among other shrines most well-known are Pir Chhattar, Shah Habib, Pir Siwag, Pir Jaggi, Jaman Shah, Shah Ashrif and Pir Rajan Shah. But most of them are of local significance and influence.

1.14 AGRICULTURE

For Agricultural purposes the district area may be divided into following zones:

-Pacca Nasheb
-Katcha Nasheb
-Layyah Thal Jandi
-Karor Thal Jandi
-Thal Kalan.

The flood water of the Indus spreads over the low lying tract of Nasheb. Hence large quantities of clay are spread in this tract, which is very good for crops. The area of Thal Jandi is plain. The Thal Kalan consists of sand dunes with strips of hard land known as Pattis. The cultivation is dependent upon rainfall, wells and tubewells. If the rainfalls are timely and adequate, Jowar, Bajra in Kharif, grams, wheat and oilseeds in Rabi get ripe without aid of any other source of irrigation. Most of the cultivation in this area is not so laborious as the land does not need to be leveled and prepared with care.

1.14.1 Pesticides

In order to protect the crops from insect/pest and diseases attacks and weeds etc. weedicides and pesticides are used by most of the farmers.

1.14.2 Manures

Now chemical fertilizers have gained much popularity specially among farmers of irrigated zone. Many varieties with different ingredients like Nitrogen, Phosphate, Potash and others have now taken place of farm-yard manure and compost.

1.14.3 Seeds

Improved and certified varieties of seeds of cotton, wheat and gram etc. are now widely used in farming according to local conditions and requirements.

1.14.4 Horticulture

Gardening is a recent introduction to the local cropping pattern. Major encouraging factor has been canal water and quality of soils that suits gardens. In this area gardening is confined to citrus fruits only. However, mangoes and date palm are also grown. Area under garden has shown considerable growth since 1978-79. In that year only 1100 acres were reported to be under gardens. After two years in 1980-81, this acreage rose to 2000, marking almost 100 per cent increase. In 1982-83, 10,556 acres were brough under garden. This shows that gardening has recorded nearly ten times growth in terms of acreage over a period of five years. Now 10,921 acres are under garden.

1.14.5 Water Logging and Salinity

The irrigated areas of this district are free from water logging and salinity. Severely water logged area (depth 0-2 metres) is not more than 10.0 per cent of the total area and moderately water logged (2-3 metres) is less than 10.0 per cent. Water is more then 3 metres deep in remaining areas of the district.

1.14.6 Forestry

Afforestation in this area was started in 1952-53 under the supervision of the defunct Thal Development Authority. At present area under forest is 34,338 acres. Forest area has following break up in the district:

1.14.7 Nurseries

The department operates Bed Nursery on the area of 6 acres alongwith 400,000 potted tube plants.

1.14.8 Fisheries

River Indus provides vast scope of activity in the field of fishing which is now a developing industry and commercial concern as many people earn their living out of it. In this area species of fish found are of excellent quality. Following species are common:

"Rohu (Labeo rohita), Mori (cirrhina marigala), Thails (cale catla), Silver carp (Hypophthalmichthys molitrix), Grass carp (Ctenopharyn godon, idell), Malli, (Wallago attu), Singari (Mystus), Khagga (Rita Rita), Saul (Chnna straitus), But pari (Notopterus notepterus), Gulfam (cyprinus carpio), Calbans (Labeo calbasu), Chiddu (Barbus), Dhangona (clupisoma garua), Sareiha (Labeo gonius), Bam (Mastacem belus armatus) and Shishn (Ambasais Ranga)."

1.14.9 Irrigation

This magnificient system was constructed during 1956-1962 from the Indus at the Jinnah Barrage near Kalabagh in Mianwali district at a cost of Rs.5.5 million. The main Thal canal is bricked upto 240 kilometres length from barrage. In order to avoid seepage of the water in porous sandy soil of Thal area, the canal was designed to a capacity of 9,300 cusecs but water was not available to its fully capacity. During Kharif season, its discharge is 6 thousand cusecs, while in Rabi it varies between 2,000 to 4,000 cusecs. The total length of branch canals and distributaries, irrigating the area of district is 962 kilometres. There are two branches, Indus and Munda, in Layyah canal division, while only one branch of Bhakkar canal division i.e. main line lower falls in this district area. Canal water is distributed from main branches to the fields through 23 distributaries, 36 minors/sub-minors, 1,321 water courses and 84 tails.

1.16 INDUSTRIES

The area was basically developed as an agricultural resource machine. Thus not much attention was ever paid to installation of industries. More-over, local resource pattern coupled with very poor entrepreneurship did not encourage any step towards industrialization of this area.

1.16.1 Large Scale Industries

a) Layyah Sugar Mill

Layyah Sugar Mill is the only large scale industrial unit. It was established in 1954 by the TDA with a capital of Rs.10 million. The mill started production on double carbonation double salphitation process. But in the year 1987-89, it was changed to deification remelt and massive modernization was also undertaken at a cost of Rs.20 millions. The mill has provided employment to several thousand persons. It has helped a lot in improving the local skill, enterprise and workmanship. The farmers as well as the landlords earn lacs of rupees a month during the crushing season.

b) Flour Mills

There are three large flour mills in the district. The detail is given as under:

Besides, there are forty three small Chakkies in Layyah city and about 231 small Chakkies exist in the rural areas and other towns of this district.

1.16.2 Cottage Industries

Common country cloth is still made in almost every large village. A particularly excellent form of Khes or check cotton cloth, is manufactured at Layyah. The cloth is of excellent texture and substance and the woven chequer work is neat and firm. It is equally suitable for carpet cloth, bed covers, curtains etc. but it chiefly serves its original purpose of a cold-weather warp. In recent years extent of its use has shown downward trend as fine cloths have come on the scene. The families, traditionally famous and known for their skill in this field, are now shifting to other professions.

Chimbas (dyers) of Layyah and Karor are still known fortheir excellent skill of printing the cloth in showy colours. Country blanket are woven by the local weavers out of sheep wool, especially in Thal area. Layyah is traditionally noted for the fine quality of its thick and well-felted blankets made in Chaubara and Nawankot. No silk weaving is done in the district. The area is known for its embroidery work. It is a cottage industry of considerable size. There are about 35 shops in the district. Most of the excellent work is done by the females in the houses.

BROAD ANALYSIS OF POPULATION CENSUS DATA

2. BROAD ANALYSIS OF POPULATION DATA

2.1 POPULATION SIZE, GROWTH AND DISTRIBUTION

2.1.1 Population Size and Growth

The total population of Layyah district was 1,121,951 as enumerated in March, 1998 with an intercensal percentage increase of 68.1 since March, 1981 when it was 666,517 souls. The average annual growth rate was 3.1 per cent during this period. The total area of district is 6,291 square kilometres which gives population density of 178 persons per square kilometre as against 106 persons observed in 1981 indicating a fast growth rate of the district.

The following table gives population, its intercensal increase and average annual growth rate since 1951:

2.1.2 Rural and Urban Distribution

The urban population was 144,203 or 12.9 per cent of the total population of the district which grew at an average rate of 5.0 per cent during 1981-98 and had increased from 4.9 per cent observed during 1972-81. There are three Municipal Committees and one Town Committee in the district.

There were 720 Mauzas (the smallest revenue unit) in 1998. Of which 26 had population over 5 thousand, 96 had 2 to 5 thousand, 203 had one to two thousand, 383 had under one thousand persons while 12 were un-inhabited.

2.1.3 Religion

As emerged from 1998 Census the population of the district is predominantly Muslims i.e. 98.7 per cent. The next higher percentage is of Christians with 0.9 points, followed by Ahmadis 0.2 per cent. While other minorities like Hindu (Jati), Scheduled Castes etc. are very small in number. The proportion of population of Muslims is almost equal in rural and urban areas. Christians are mostly living in urban areas representing 1.1 per cent as compared to 0.8 per cent in rural areas. Ahmadis are more, in proportion, in rural than urban areas. The following table gives percentage of population by religion in rural and urban areas in 1998.

2.1.4 Mother Tongue

The mother tongue refers to the language used for communication between parents and their children in any household. The question was asked about all individuals living in any housing unit. Siraiki is the predominant language being spoken in the district, representing 62.3 per cent of the population, followed by Punjabi, Urdu and Pushto spoken by 32.6, 3.1 and 1.5 per cent respectively while others speak Sindhi, Balochi, Bravi, Dari etc. Leaving aside the rural area which is influenced by the local people, the proportion of Siraiki speaking represents 65.0 per cent, Punjabi 31.9 per cent, Urdu 1.5 per cent and Pushto 1.4 per cent. While remaining people speak Sindhi, Balochi, Bravi, Dari etc. The proportions of people speaking Punjabi, Urdu and Pushto are more in urban than in rural areas. The following table gives details on percentage of population by mother tongue being spoken in rural and urban areas in 1998.

2.1.5 Disabled Persons

Disability refers to malfunctioning of any organ of the body, visible or invisible. Here we refer to the former disability. The disability is classified as blind, deaf and mute, crippled, insane, mentally retarded, multiple disability and any other visible disability. Disabled persons constituted 1.9 per cent of the total population. Among them almost 68 per cent were males and 32 per cent females. Of disabled persons, 21.0 per cent were crippled, followed by blind, deaf/mute, multiple disability persons, mentally retarded, and insane representing 8.0, 6.8, 6.7, 5.0 and 2.5 respectively. The detailed data on disability are shown in Table 2.4.

2.2 SEX, AGE AND MARITAL STATUS

2.2.1 Sex Ratio

Sex ratio, i.e. number of males for every 100 females was 107 per cent recorded in 1998 Census which had decreased from 112 in 1981. The ratio was 107 per cent in rural and 107 in urban area that is the same sex ratio was observed in both the areas.

2.2.2 Age Structure

In 1998 the proportion of the infants under one year was 2.6 per cent, children under 5, 15.7 per cent, children under 10 year 32.3 per cent, under 15 year 46.1 per cent of the total population. Those eligible for obtaining National Identity Card (i.e. over 18 years) represented 48.6 per cent while those eligible for casting vote (i.e. 21 years and above) were 41.0 per cent of the total population. The proportion of population of working age groups i.e. 15 to 64 years, were recorded as 50.3 per cent and over 65 year 3.6 per cent resulting age dependency ratio of 99.0 per cent. Women of reproduction ages i.e. 15 -49 years, were 44.0 per cent of their total population.

The proportion of infants and children under 15 years and population 65 and over were higher in rural areas when compared to population living in towns, resulting high dependency ratio in the former than in the latter areas representing 101.6 and 82.5 per cent respectively. The following table gives percentage of population by selected age groups, sex, urban and rural areas with more detail.

TABLE 2.5 POPULATION PERCENTAGE DISTRIBUTION BY SELECTIVE AGE GROUPS, SEX, AND RURAL/URBAN AREAS, 1998

Age dependency Ratio	99.0	100.7	97.2	101.6	103.6	99.7	82.5	82.7	82.3

As envisaged from age pyramid the population of Layyah district is still very young having broad base implying thereby sustaining of fertility at a very high level. However, comparison of age data with the 1981 Census indicates that fertility has started declining resulting reduction in percentage share of children under 5 though the effect of shifting of ages of children under 5, due to misreporting, can not be ruled out. The proportionate share of population declined gradually with advancing in ages and taper off to a narrow peak at age 75 and over.

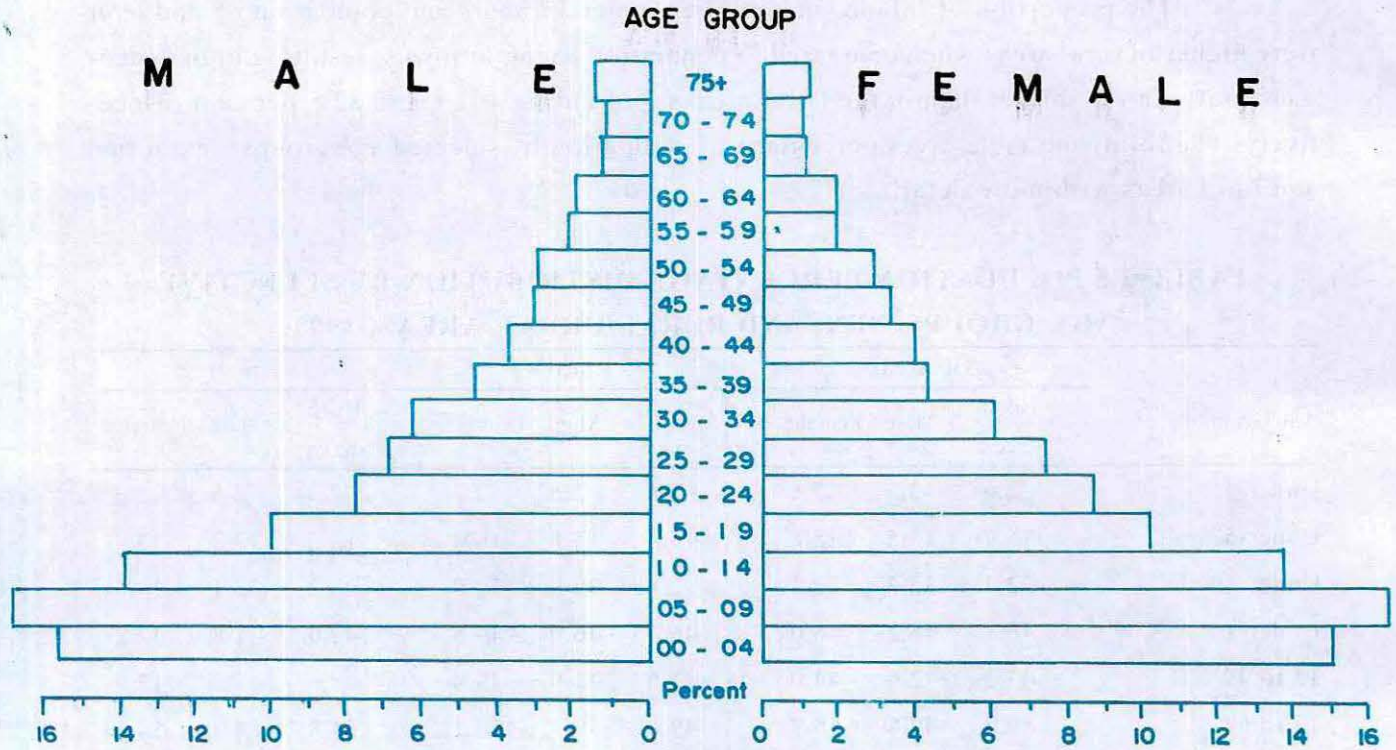
1998



2.2.3 Marital Status

The population 15 years and above as enumerated in 1998 Census was further classified into never married, married, widowed and divorced. Of that population 30.7 per cent were never married, 63.6 per cent married, 5.4 per cent widowed and 0.3 per cent divorced. The percentage share of never married male was much higher than the female, being 35.9 and 25.2 per cent respectively. The percentage of never married females was higher in urban than in rural areas implying thereby that fertility must be at lower level in the former than the latter area. Table 2.6 gives details about percentage of population 15 years and above by marital status, sex and rural and urban residence, 1998.

TABLE 2.6 POPULATION PERCENTAGE DISTRIBUTION BY MARITAL STATUS, SEX AND RURAL/URBAN AREAS, 1998

Area	Never Married			Married			Widowed			Divorced		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
All Areas	30.7	35.9	25.2	63.6	60.3	67.0	5.4	3.6	7.4	0.3	0.2	0.4

Urban	37.0	42.1	31.4	57.0	54.4	59.9	5.6	3.2	8.2	0.4	0.3	0.5

The proportion of never married females has drastically increased since 1981 when it was 15.8 per cent. The increasingproportion is an indication of decline in fertility level which was sustaining at very high level for a long period.

2.2.4 Female of Reproductive Ages by Marital Status

Of the total females population 44.0 per cent are in reproductive ages i.e. 15-49 with slightly more percentage in urban than in rural areas, being 47.9 and 43.4 per cent respectively. As compared to 44.0 per cent of females of reproductive ages as registered in 1998 there were 41.6 per cent in 1981.

Among the females of reproductive ages 30.2 per cent were never married, 67.5 per cent currently married, 1.9 per cent widowed and 0.4 per cent divorced. About 6.4 per cent of ever married females of reproductive ages had no child, 8.2 per cent one child, 10.9 per cent two children, 11.6 per cent three children while 62.9 per cent had more than three children. The proportion of never married females of reproductive ages were high in urban as compared to rural areas.

2.3 LITERACY AND EDUCATIONAL ATTAINMENT

2.3.1 Literacy

A person was treated as literate in 1998 Census if he could read a newspaper or a journal of same standard and could write a simple letter in any language. The literacy is measured as the ratio, in percentage, of literate population to corresponding population aged 10 and over. The literacy ratio in the district has increased from 18.9 per cent in 1981, to 36.7 per cent in 1998. The literacy ratio for males is 53.0 per cent as against 23.4 per cent for females. The ratio is much higher in urban when compared with rural areas both for male and female. Table 2.7 shows literacy ratio by rural and urban areas for the year 1981 and 1998.

TABLE 2.7 LITERACY RATIO BY SEX AND RURAL/URBAN AREAS,1981 AND 1998

Urban	45.7	58.3	31.4	62.5	72.6	51.5

2.3.2 Educational Attainment

The percentage of educated persons, like literacy ratio, has also increased with almost similar pattern but with slightly lower level than level of literacy. Table 2.8 provides some facts by sex in urban and rural areas from the 1998 Census.

Urban	62.2	72.3	51.3

2.3.3 Enrolment Ratio

Enrolment ratio is the proportion, in percentage, of students in population aged 5 to 24. The ratio was 31.2 per cent as measured from 1998 Census data with significant rural urban differential both for males and females. The remarkable differential is between females whose enrolment ratio in urban areas was registered as 47.7 per cent as against their ratio of 19.6 per cent in rural areas, and 38.5 per cent of male ratio in the district as a whole. Table 2.9 provides details by sex in urban and rural areas from the 1998 Census.

2.3.4 Level of Education

Of the total educated persons 23.0 per cent were below primary, 36.2 per cent had passed primary, 20.2 per cent middle, 13.5 per cent matriculate, 4.1 per cent intermediate, 1.8 per cent graduates, 0.6 per cent post graduates while 0.3 per cent were diploma/certificate holders. Regarding sex differential males were more educated and had higher education than females. In urban areas of the district there were around 3.8 thousand graduates while in rural areas the level of education tapered off sharply with higher level of education and hardly 3.3 thousand were found with graduate degree.

2.4 MIGRATION

The total number of life time in-migrants in Layyah district were 111,959 or 10.0 per cent of population of the district. Of total life time in-migrants 22,129 persons settled in the towns. Of total district migrants 79.6 per cent came from other districts of Punjab, 4.0 per cent were from Sindh, NWFP and Baluchistan, while remaining 16.4 per cent were Pakistanis who repatriated from other countries. There is only 16 migrants whose birth place is not reported. Table 2.6 throws light on life time in-migrants with their decomposition by place of origin, and place of settlement in rural and urban areas of the district.

2.5 ECONOMIC CHARACTERISTICS

2.5.1 Economically Active Population

The economically active population is defined here as the persons working, most of the time during the year preceding the census date i.e. 5th March, 1998, looking for work, laid off and un-paid family helpers assisting their family. The economically active population as enumerated in the last census was 13.9 per cent of the total population or 20.5 per cent of the population 10 years and over i.e. the population exposed to the risk of entering the economically active life at any time. The formal percentage is known as Crude Activity Rate (CAR) while the latter is known as Refined Activity Rate (RAR). Of the total male population 26.1 per cent were economically active, while 73.9 per cent not economically active, 32.3 per cent children under 10 years, 18.7 per cent students, 1.9 per cent domestic workers while 21.0 per cent were land lords, property owners, retired persons, disabled etc. The participation rate is much higher in urban areas as compared to people living in rural areas. Further detail can be seen in Table 2.11 given below:

Un-employment Rate	23.2	23.7	6.0	22.8	23.2	7.3	25.2	26.3	3.0

2.5.2 Unemployment

Unemployment rate is measured as ratio of looking for work and laid off in total economically active population comprising employed, looking for work, laid off and un-paid family helpers, generally representing in percentage. The unemployment rate in the district was 23.2 per cent which was mainly due to unemployment amongst male representing 23.7 per cent. While female unemployment rate was just 6.0 per cent. This is because of their small proportion in their total economically active population. The unemployment rate higher in urban as compared to rural areas representing 25.2 and 22.8 per cent respectively. The details can be seen in Table 2.11.

In rural areas people having skilled agricultural and fishery works were again in majority, followed by elementary occupationss and service workers, shop and market sales workers, represented 52.1, 29.0 and 6.1 per cent respectively. The highest percentage in urban area is of elementary occupations, followed by service workers, shop and market sales workers and professional having 41.8, 19.8 and 10.9 per cent respectively. 2.6 IMMUNIZATION

To evaluate vaccination programme the question about immunization of children under 10 years against 6 basic diseases i.e. tuberculosis, diphtheria, pertussis, tetanus, polio and measles was first time enquired through the 1998 Census. As reported in the census over 1.8 lacs children were vaccinated representing 50.5 per cent of the total children under 10 years, 4.4 had not been vaccinated while nothing was known about 45.1 per cent children. Slightly better position for vaccination was reported in urban areas where incidence of vaccinated children was 67.7 per cent as compared to 48.3 per cent in rural areas. Also slight better rate of vaccination was observed for male children than female children. For further details data in Table 2.15 can be seen.

2.7 NATIONAL IDENTITY CARD

This question was also asked through the 1998 Census for the first time for evaluating National Registration Scheme introduced in 1973. Of population 18 years and above 63.7 per cent had obtained National Identity Cards and 36.3 had yet to obtain such cards. Male percentage is quite higher as compared to female for obtaining National Identity Card. Their percentage shares were 73.3 and 53.5 per cent respectively. Rural and Urban differential was also reported in obtaining National Identity Cards. Over 73 per cent of people in the cities had obtained National Identity Cards while such percentage was about 62 points in rural areas. However, details can be seen in the table given below:

2.8 HOMELESS POPULATION

In the entire district there were only 4,418 persons who had no shelters as reported in 1998 Census. Of these 98.7 per cent were Muslims with majority, 61.4 per cent, never married, 54.3 per cent males while 45.7 per cent females. Of total homeless people 11.8 per cent were in urban areas, all Muslims. Nearly three-fifths of them were never married, 52.3 per cent males and 47.7 per cent females.

PART - III
BROAD ANALYSIS OF HOUSING CENSUS DATA

3. BROAD ANALYSIS OF HOUSING DATA

3.1 LEVEL OF CONGESTION

Level of congestion of housing units is determined in terms of persons per housing unit, or persons per room or rooms per housing unit.

The number of persons per housing unit has increased from 6.5 in 1981 to 7.3 in 1998 , implying thereby that houses have been congested with time because of slow tempo of construction and high growth rate of population observed during the last decade or so.

The persons per room has decreased from 3.8 in 1980 to 3.2 in 1998 due to increased number of rooms per housing unit from 1.7 to 2.3 during this period. In term of percentage housing units with one room only it has considerably decreased i.e. from 61.1 to 31.6 points while housing units with more than one room have increased from 38.9 in 1980 to 68.4 in 1998. The table given below provides comparative data on congestion from last two censuses.

TABLE 3.1 INDICES OF CONGESTION IN 1980 AND 1998

Index	1980	1998
Persons per Housing Unit	6.5	7.3
Persons Per Room	3.8	3.2
Rooms per Housing Unit	1.7	2.3
Housing Units with one Room (Percentage)	61.1	31.6
Housing Units with 2-4 rooms (Percentage)	36.7	61.6
Housing Units with 5 rooms and more (Percentage)	2.2	6.8

3.2 NATURE OF TENURE

Over 88 per cent of the housing units are owned, 2.9 per cent rented while remaining 8.9 per cent rent free. The percentage share of owned housing units has increased from 84.4 per cent since 1980. Rented units has also increased from 2.4 per cent. Regarding urban/rural differential, the percentage share of owned housing units are 78.2 and 89.6 while those of rented and rent free housing units are 16.2 and 1.0 and 5.6 and 9.4 per cent respectively. Table 3.2 gives detailed data on type of tenure with rural urban break up in 1980 and 1998.

TABLE 3.2 NATURE OF TENURE BY RURAL/URBAN AREAS, 1980 AND 1998

Tenure	All Areas		Rural		Urban

Rent Free	13.2	8.9	13.9	9.4	6.7	5.6

3.3 PERIOD OF CONSTRUCTION

There has been continuous sharp decline in construction of housing units during the last one decade or so. About 48.4 per cent of housing units were constructed at least 10 years ago, 30.1 per cent during 5 to 10 years before the 1998 Census taking, only 21.0 per cent were constructed during 5 years preceding the census date and hardly 0.5 per cent were constructed during a year before census taking. Almost similar pattern is observed in urban and rural areas except slight variation in their percentage shares.

3.4 CONSTRUCTION MATERIAL OF OUTER WALLS

unbaked bricks were the main construction material used in construction of outer walls of the buildings. Around 63.4 per cent of such material were used while baked bricks, cemented blocks and shaped stones were hardly used by 34.5 per cent of the housing units. Baked bricks, cemented blocks and shaped stones, in urban areas, and unbaked bricks, in rural areas, were the main construction material being used by 68.4 and 68.2 per cent respectively. Table 3.3 provides detailed data on construction material used in outer walls with urban rural break up during 1998.

TABLE 3.3 MATERIAL USED IN OUTER WALLS BY RURAL/URBAN AREAS, 1998 (IN PERCENTAGE)

Others	1.2	1.2	1.3

3.5 CONSTRUCTION MATERIAL OF ROOFS

About 7.0 per cent of the housing units used reinforced cement concrete or bricks (RCC/RCB) as construction material in roofs of their buildings, 12.6 per cent housing units used cement or iron sheets and 65.1 per cent used wood/bamboo while remaining have used other construction material. Marked differences are observed in construction materials between urban and rural housing units though the wood/bamboo are the main material used in both areas. There are 46.5 per cent housing units in urban area and 67.8 per cent in rural areas using such materials.

Others	15.3	14.6	20.3

3.6 SOURCE OF DRINKING WATER

Around 5 per cent of the housing units are using piped water, majority of which has that facility in their own houses. A majority is using hand pump for potable water, 93.8 per cent. Just 0.1 per cent households are using potable water taken out from wells. Table 3.5 provides details about the source of drinking water with rural and urban break up in 1998.

3.7 SOURCE OF LIGHTING

Predominant housing units are still using kerosene oil as source of light representing 53.0 per cent. However in urban localities 92.3 per cent housing units are using electricity for this purpose. In over all electricity is being used by approximately 46.6 per cent of the housing units while other sources of light like patromax, mustard oil etc. are hardly being used by 0.4 per cent of the housing units. Table 3.6 provides, in detail, percentage of housing units by source of light with urban and rural areas in 1998.

3.8 COOKING FUEL USED

Nearly 97 per cent of housing units are using wood as cooking fuel in their houses while 1.5 per cent are using kerosene oil for this purpose. Hardly 2 per cent are using gas and other sources of cooking fuel in their houses. Regarding urban and rural differential wood is mainly used, representing 97.5 per cent in rural and 91.9 per cent in urban areas, followed by kerosene oil in rural areas and gas in urban areas representing 1.5 and 5.9 per cent housing units respectively. Table 3.7 indicates percentage housing units by source of cooking fuel with urban rural break up in 1998.

3.9 AVAILABILITY OF KITCHEN , BATHROOM AND LATRINE

Separate kitchen, bathroom and latrine are available in 23.0, 18.3 and 16.3 per cent of the housing units respectively. Shared kitchen, bathroom and latrine facilities are available in 9.6, 7.3 and 6.2 per cent of the housing units while remaining have no kitchen, bathroom and latrine facilities in their housing units. Significant differences are observed in rural and urban areas regarding such facilities. The percentage shares of separate kitchen, bathroom and latrine facilities are more in urban as compared to rural areas. While percentage shares of non-availability of kitchen, bathroom and latrine facilities are far higher in rural than urban areas which is the characteristic of villagers in developing countries like Pakistan. Table 3.8 gives details on availability of kitchen, bathroom and latrine facilities in housing units by urban and rural residence, 1998.

3.10 SOURCE OF INFORMATION

The question on source of information was asked for the first time in the 1998 Census. There were only three main sources of information enquired through the census. These were watching of T.V., listening to radio and reading of newspapers. Around 35 per cent of the households have access to television, radio or newspapers for keeping themselves informed about day to day happenings around them. Over all 62.6 per cent of the households have T.V facility. About 58.6 per cent of the residents are listening to radio. Over 44 per cent of people are reading daily newspapers. Table 3.9 provides further details on percentage household by source of information at rural and urban residence in 1998.
